How to Build Big-Inch Mopar Small-Blocks Simon and Schuster

This book proposes a re-interpretation of Article 2(4) of the Charter of the United Nations to read, or at least include, respect for the inviolability of State territory. While States purport to obey the prohibition of the Use of Force, they frequently engage in activities that could undermine international peace and security. In this book the author argues that State practice, opinio juris, as well as contentious and advisory opinions of the International Court of Justice, have promoted the first limb of Article 2(4). Although wars between States have decreased, the maintenance of international peace and security remains a mirage, as shown by the increase in intra- and inter-State conflicts across the world. The author seeks to initiate a rethinking of the provision of Article 2(4), which the International Court of Justice has described as the cornerstone of the United Nations. The author argues that the time is ripe for States to embrace an evolutive interpretation of Article 2(4) to mean respect, as opposed to the traditional view of the threat, or the use, of force. He also evaluates the discourse regarding territorial jurisdiction in cyberspace and argues that the efforts made by the international community to apply Article 2(4) to cyberspace suggest that the article is a flexible and live instrument that should be adjusted to address the circumstances that endanger international peace and security. This book will engineer a serious debate regarding the scope of Article 2(4), which before now has always been limited to the threat or use of force. As a result, it will be of interest to academics and students of public international law, as well as diplomats and policymakers.

The new Dodge Charger, Challenger, and other LX-platform cars bring modern V-8 performance to unparalleled heights, and the new Challenger and Charger Hellcats are the most powerful American production cars today. The outrageous performance and audacious styling has earned a large and dedicated following. However, you can tune and modify the Chrysler 300, Dodge Magnum, Charger, and Challenger for more performance, and for many owners, fast is not fast enough. In the pursuit of a higher-performing LX-platform car, former Mopar Muscle editor Randy Bolig has created this book to show you how to extract ultimate performance from these cars. Chrysler has built more than one million Chargers, Challengers, and other full-size-platform cars starting with the Dodge Magnum and Chrysler 300. These cars offer competent handling, braking, and suspension performance, but they can be made much better through a set of targeted upgrades using better aftermarket equipment. Bolig gives you a comprehensive guide to the cars and engines. He details the features, benefits, and drawbacks of each package or set of upgrades, so you select the best modification for your car, application, and budget. He also covers basic to extreme modifications for the R/T and SRT8 models with the 5.7-, 6.1-, and 6.4-liter Hemi engines. Guidance for installing heads, rotating assemblies, ignition upgrades, higher-performance injectors, and many other parts are provided. But, this book doesn't just discuss performance; it shows you how to do it with comprehensive, step-by-step product installs for a cat-back exhaust system, hand-held ignition tuner, cold-air intake, and supercharger. If you have been searching for the best performance package to make your Charger, Challenger, or full-size Chrysler car stand out from the crowd, you need this book. It has the latest information, so you can learn how to install all the products and get your car back out on the road.

For a century, almost all light-duty vehicles (LDVs) have been powered by internal combustion engines operating on petroleum fuels. Energy security concerns about petroleum imports and the effect of greenhouse gas (GHG) emissions on global climate are driving interest in alternatives. Transitions to Alternative Vehicles and Fuels assesses the potential for reducing petroleum consumption and GHG emissions by 80 percent across the U.S. LDV fleet by 2050, relative to 2005. This report examines the current capability and estimated future performance and costs for each vehicle type and non-petroleum-based fuel technology as options that could significantly contribute to these goals. By analyzing scenarios that combine various fuel and vehicle pathways, the report also identifies barriers to implementation of these technologies and suggests policies to achieve the desired reductions. Several scenarios are promising, but strong, and effective policies such as research and development, subsidies, energy taxes, or regulations will be necessary to overcome barriers, such as cost and consumer choice.
