Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

Motocross began in England in the 1920s  
and took firm root in post-war Europe.  
After arriving in North America in the late  
1960s, the sport was embraced by  
enthusiasts and developed into an  
American phenomenon. By the early 1980s  
riders from the USA were dominating the  
sport ' s natural-terrain circuits, and the  
uniquely-American spinoff discipline of  
Supercross was packing NFL stadiums  
nationwide. In 2005, the Motorcycle Hall  
of Fame Museum created an exhibit,  
Motocross America, which celebrates the  
history of American motocross. Motocross  
America is a lavishly illustrated book that  
features the bikes and memorabilia from  
the museum display and text by Bill Amick.  
The Motocross America exhibit is open to

the public at the Motorcycle Hall of Fame  
Museum in Pickerington, Ohio, through  
2006.

America, Incorporated Introduction to Combustion is the leading combustion textbook for undergraduate and graduate students because of its easy-to-understand analyses of basic combustion concepts and its introduction of a wide variety of practical applications that motivate or relate to the various theoretical concepts. This is a text that is useful for junior/senior undergraduates or graduate students in mechanical engineering and practicing engineers. The third edition updates and adds topics related to protection of the environment, climate change, and energy use. Additionally, a new chapter is added on fuels due to the continued focus on conservation and energy independence.
