CRC Press

Now more than ever, architects need an interpretive guide to understand how the building code affects the early design of specific projects. This easy-to-use, illustrative guide is part of a new series covering building codes based on the International Building Code for 2006. This book presents the complex code issues inherent to elementary and secondary school design in a clear, easily understandable format.

Visionary designer Jack Northrop built a series of experimental "flying wing" aircraft both before and during WWII. One of the most radical designs of the post-war era, the propeller-driven YB-35 bomber's all-wing design minimized drag and promised maximum payload capacity and terrific endurance. The YB-49, a turbojet powered variant built on the YB-35 airframe, forever altered aviation history and inspired the design of the B-2 Spirit stealth bomber. Originally printed by Northrop Aircraft in 1948, the YB-49 Flying Wing Pilot's Flight Operating Manual taught pilots everything they needed to know before entering the cockpit. Originally classified "Restricted," the manual was declassified long ago and is here reprinted in book form. This affordable facsimile has been reformatted, and color images appear as black and white. Care has been taken however to preserve the integrity of the text.

This book is the leader among the new generation of text books on quality that follow the systems approach to creating quality in products and services; the earlier generations focused solely on parts of the system such as statistical methods, process control, and management philosophy. It follows the premise that the body of knowledge and tools documented by quality professionals and researchers, when employed in designing, creating and delivering the product will lead to product quality, customer satisfaction and reduced waste. The tools employed at the different stages of the product creation cycle are covered in this book using real world examples along with their theoretical bases, strengths and weaknesses. This textbook can be used for training - from shop floor personnel to college majors in business and engineering to practicing professionals. Graduate students training as researchers in the quality field will also find useful material. The book has been used as the text for a Professional Series Massive Open Online Course offered by the Technical University of Munich on edX.org, through which tens of thousands of participants from all over the world have received training in quality methods. According to Professor Dr. Holly Ott, who chose the book for the course, the text is one of the main factors contributing to success of this MOOC. The Third Edition has been fully revised to be friendly for self-study, reflects changes in the standards referenced such as ISO 9000, and includes new examples of application of statistical tools in health care industry. Features: Reviews the history of quality movement in the U.S. and abroad Discusses Quality Cost analysis and quality's impact on a company's bottom line Explains finding customer needs and designing the product using House of Quality Covers selection of product parameters using DOE and reliability principles Includes control charts to control processes to make the product right-the-first-time Describes use of capability indices Cp and Cpk to meet customer needs Presents problem solving methodology and tools for continuous improvement Offers ISO 9000, Baldrige and Six Sigma as templates for creating a quality system
2003 National Construction Estimator

Both the Training and Self-Study Manual and the Participants Workbook can be used as a stand-alone problem-solving course or in conjunction with Kick Down the Door of Complacency. The Training and Self-Study Manual enables participants to learn a basic operational problem-solving method by applying it to two case studies, conducted in two workshop sessions. It contains materials presented in the Participants Workbook as well as detailed information and directions for the trainer conducting the workshops. Because each person needs to be trained in problem-solving in order to achieve Continuous improvement on an organizational level, a Participants Workbook is also available. This is an excellent instructional tool that will bring Continuous Improvement principles to life for your employees.

This tenth edition of the most popular and trusted guide reflects all the latest amendments to

the Building Regulations, planning permission and the Approved Documents in England and Wales. This includes coverage of the recent changes to use classes, updated sections on planning permission, permitted development and application fees. We have included the revisions to Approved Document B (as a result of the Hackitt Review), as well as the latest changes to Approved Documents F and L, and the new documents O (overheating) and S (electric vehicle charging points), which come into effect in June 2022. Giving practical information throughout on how to work with (and within) the Regulations, this book enables compliance in the simplest and most cost-effective manner possible. The no-nonsense approach of Building Regulations in Brief cuts through any confusion and explains the meaning of the Regulations. Consequently, it has become a favourite for anyone working in or studying the building industry, as well as those planning to have work carried out on their home. It is essential reading for all building contractors and subcontractors, site engineers, building engineers, building control officers, building surveyors, architects, construction site managers and DIYers.

The Motor

This text is a companion manual, presenting techniques to facilitate a continuous improvement effort designed to banish complacency from an organization. It presents instructional directions to enable people to learn a basic operational problem-solving method by applying it to two case studies, conducted in two workshops. It provides materials to be used by the workshop participants and directions for the trainer conducting the workshops.
