order, organization, form, in response to function." This book, opening with these words, presents an entirely new theory of the process of design. In the first part of the book, Christopher Alexander discusses the process by which a form is adapted to the context of human needs and demands that has called it into being. He shows that such an adaptive process will be successful only if it proceeds piecemeal instead of all at once. It is for this reason that forms from traditional un-self-conscious cultures, molded not by designers but by the slow pattern of changes within tradition, are so beautifully organized and adapted. When the designer, in our own self-conscious

culture, is called on to create a form that is adapted to its context he is unsuccessful, because the preconceived categories out of which he builds his picture of the problem do not correspond to the inherent components of the problem, and therefore lead only to the arbitrariness, willfulness, and lack of understanding which plague the design of modern buildings and modern cities. In the second part, Mr. Alexander presents a method by which the designer may bring his full creative imagination into play, and yet avoid the traps of irrelevant preconception. He shows that, whenever a problem is stated, it is possible to ignore existing concepts and

---

to create new concepts, out of the structure of the problem itself, which do correspond correctly to what he calls the subsystems of the adaptive process. By treating each of these subsystems as a separate subproblem, the designer can translate the new concepts into form. The form, because of the process, will be well-adapted to its context, non-arbitrary, and correct. The mathematics underlying this method, based mainly on set theory, is fully developed in a long appendix. Another appendix demonstrates the application of the method to the design of an Indian village. The Carlsberg Foundation's

The paleontologist and professor of anatomy who co-discovered Tiktaalik, the "fish with hands," tells a "compelling scientific adventure story that will change forever how you understand what it means to be human" (Oliver Sacks). By examining fossils and DNA, he shows us that our hands actually resemble fish fins, our heads are organized like long-extinct jawless fish, and major parts of our

genomes look and function like those of worms and bacteria. Your Inner Fish makes us look at ourselves and our world in an illuminating new light. This is science writing at its finest—enlightening, accessible and told with irresistible enthusiasm.

wonderful uses of fleece! Allow author Nancy Cornweel to lead you on a sewing expedition. *Adventures with Polarfleece* covers territories as fabric and garment care, sewing machine and serger basics, pattern choices and simple design changes. Included are 200 photographs and 150 color illustrations to guide you on a tour of quick and easy techniques for seams, ready-to-wear edge finishing and no-hassle zippers. Nancy also shows a safety technique on how to avoid the dreaded "frog mouth" buttonhole! *Adventures with Polarfleece* also includes a special excursion in ultrasuede - drawcords, patches, button loops, piping and pockets;

sculpturing, polar pintucks and embroidery. A collection of fifteen projects are included. This sewing expedition has been photographed every step of the way and is clearly mapped and illustrated. Included are instructions for jackets, pull-overs, a cape, a five-minuet hat, blankets, pillows, exceptional accessories and more! Explore and discover the endless project possibilities for the entire family. Fleece is one of the sewing world's premier fabrics for comfort and warmth. It is easy to sew with beautiful results. Nancy Cornwell will lead you down a path of discovery filled with excitement, intrigue and inspiration. If the urge to explore is
