Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

Diesel Engines for Land and Marine Work

Jerry Setser recognizes that everybody's life is lived in seasons, including his own. As he enters a new season in his life, Setser decides to reflect on his past and recount his journey. This book follows his personal, lifelong pilgrimage towards enlightenment. Jerry vividly describes his humble beginnings growing up and living on farms in his youth, spending many hours a day working hard and learning the intricacies of such labor. His complicated personal and family relationships are developed and fleshed out as he grows older. Jerry

constantly gains more insight into life as he encounters individuals that alter the course of his journey. His story takes many twists and turns along his path to finding God and inner peace. For his early years, Jerry was never devoutly religious, but once he finds God, his life was never the same again. From using religion to cope with hardships to spreading the Word of God in the former Soviet Union, *Seasons of My Life* is a surprising and insightful look at the life of a man who has learned some of life's most important lessons over the years. Setser's story will lead to reevaluate the role of religion in your own life and will stick with you long after you finish it.

Bulletin

"Everyone needs power. Merrick Lockwood wants to use stirling engines to make that power. This book tells how Mr. Lockwood and his team, spent several years developing a

simple, low tech, 5-HP Stirling engine in Dhaka, Bangladesh. It's the story of what worked then and what didn't along with Mr. Lockwood's advice on which approaches would work well today. Lockwood's team built a Stirling engine that could burn agricultural garbage (in this case rice husks), however different burners could be designed today to burn previously wasted fuels. Lockwood shows how he used the simple ideas from historic Stirling engines along with his team's innovations to make his engines work. This book is filled with detailed descriptions of Mr. Lockwood's engines along with 34 pages of drawings that have survived. The book includes 184 photographs that show the tools, and methods of fabrication that Lockwood used."--Publisher's description.

Internal Combustion Engine Manual
Covers the maintenance and repair of

small engines, diagnosis of common problems, off-season storage, and component safety.

Parks and Recreation

" ... This might be called a "sketch book of engines." Pictures have been substituted for words wherever possible, and the technical language has been held to a minimum. Most

people today have at least a nodding acquaintance with the internal combustion engine. To the great majority it is what makes an automobile go. But to others it may be the motive power for a tractor or truck, a cruiser or a tug-boat, a fighter plane or a transport. It may furnish power and light to an isolated farm, to a saw-mill in the woods, or to an entire city. For today the internal combustion engine has invaded all fields, from the bottom of the ocean to the limits of the heavens. We will demonstrate that they all are based on three things AIR, FUEL and IGNITION. We need those three things to make any internal combustion engine run. We have rather arbitrarily classified them in three groups: automobile, aircraft, and Diesel... " (1955 - Public Relations Staff GENERAL MOTORS)
