Biomass, Biofuels, Biochemicals:
Circular Bioeconomy:
Technologies for Biofuels and

Biochemicals provides comprehensive information on strategies and approaches that facilitate the integration of technologies for the production of bio-based fuels, chemicals and other value-added products from wastes with waste biorefinery concepts and green strategies. The book also covers lifecycle assessment and techno-economic analyses of integrated biorefineries within a circular bioeconomy framework. As there has been continual research on new designs in production and consumerist approaches as we move towards sustainable development by scientists of

various disciplines, law makers, environmental activists and industrialists, this book provides the latest details. Resources consumption and environment degradation necessitates a transition of our linear economy towards sustainable social and technical systems. As fossil resources are only projected to fulfill the needs of the population for the next couple of centuries, new tactics and standards must be created to ensure future success. Covers recent developments and perspectives on biofuels and chemicals production Provides the latest on the integration of technologies

and processes for biofuels and chemicals production Paves a way forward roadmap to achieve Sustainable Development Goals Covers recent developments in lifecycle assessment and techno-economic analysis using a waste biorefinery approach
