“You’ll never walk again.” California Senator Omer Rains had been a politician on the global stage, a power-broking lawyer of A-list celebrities, and conqueror of some of the highest mountains in the world. But when a paralyzing brain aneurysm and stroke hit him at age 61, he became more helpless than a small child. In *Back to the Summit*, Rains takes readers on a courageous journey toward recovery, both physical and spiritual, as he reflects on the people, events, and American history that shaped his life and gave him the strength to dare to walk again. Every flashback to the past offers insight into the philosophy that once saved his life and now defines his every action: “Get up from every fall, no matter how great or far, and continue to live life fully.” Those who have suffered physical trauma may find hope in his story; their loved ones may gain insight and

understanding. And any reader who has ever faced a mountain of a setback will be inspired to keep on fighting to live again. Back to the Summit takes us on a journey toward physical and spiritual recovery that reminds us that anything is possible.

Data are becoming the proverbial coin of the digital realm: a research commodity that might purchase reputation credit in a disciplinary culture of data sharing, or buy transparency when faced with funding agency mandates or publisher scrutiny. Unlike most monetary systems, however, digital data can flow in all too great an abundance. Not only does this currency actually grow on trees, but it comes from animals, books, thoughts, and each of us! And that is what makes data curation so essential. The abundance of digital research data challenges library and information science professionals to harness this flow of information streaming from research discovery and scholarly pursuit and preserve the unique evidence for future

use. Volume One of *Curating Research Data* explores the variety of reasons, motivations, and drivers for why data curation services are needed in the context of academic and disciplinary data repository efforts. Twelve chapters, divided into three parts, take an in-depth look at the complex practice of data curation as it emerges around us. Part I sets the stage for data curation by describing current policies, data sharing cultures, and collaborative efforts currently underway that impact potential services. Part II brings several key issues, such as cost recovery and marketing strategy, into focus for practitioners when considering how to put data curation services in action. Finally, Part III describes the full lifecycle of data by examining the ethical and practical reuse issues that data curation practitioners must consider as we strive to prepare data for the future. Digital data is ubiquitous and rapidly reshaping how scholarship progresses now and into the future. The information expertise of librarians can help ensure the resiliency of digital

data, and the information it represents, by addressing how the meaning, integrity, and provenance of digital data generated by researchers today will be captured and conveyed to future researchers.

In this riveting new collection, author Nila Gupta reveals intersections of contemporary Canadian and Indian cultures with raw authenticity. A young Canadian travels to India to explore her roots and find the woman who loved her like a daughter; a doctor struggles against military corruption as he investigates a soldier's suspicious injuries in Kashmir; a gay man returns to the India of his childhood in search of redemption for his betrayal of his first love. Readers take a rickety tin bus up the side of a mountain, taste the sweetness of ras gullas, experience the tension between a young Canadian-raised woman and her father and sink to the scented jostle of the ladies compartment

on an Indian train. The characters in these vivid stories are dealing with universal struggles: who they are, what they can become and how they can find compassion within challenging circumstances. This debut collection will resonate with all those who have searched for their own identity and sought understanding in a world of contradictions.

NATIONAL BESTSELLER From the leading theorist of the Metaverse comes the definitive account of the next internet: what the Metaverse is, what it will take to build it, and what it means for all of us. The term “Metaverse” is suddenly everywhere, from the front pages of national newspapers and the latest fashion trends to the plans of the

most powerful companies in history. It is already shaping the policy platforms of the US government, the European Union, and the Chinese Communist Party. But what, exactly, is the Metaverse? As pioneering theorist and venture capitalist Matthew Ball explains, it is a persistent and interconnected network of 3D virtual worlds that will eventually serve as the gateway to most online experiences, and also underpin much of the physical world. For decades, these ideas have been limited to science fiction and video games, but they are now poised to revolutionize every industry and function, from finance and healthcare to education, consumer products, city planning, dating, and well beyond. Taking us on an expansive tour of the “next internet,” Ball demonstrates that many proto-Metaverses are already here, such as Fortnite, Minecraft, and Roblox. Yet these offer only a glimpse of what is to come. Ball presents a comprehensive definition of the Metaverse before explaining the technologies that will power it—and the breakthroughs that will be necessary to fully realize it. He addresses the governance challenges the Metaverse entails; investigates the role of Web3, blockchains, and NFTs; and predicts Metaverse winners and losers. Most importantly, he examines many of the Metaverse’s almost unlimited applications. The internet will no longer be at arm’s length; instead, it will surround us, with much of our lives, labor, and leisure taking place inside the Metaverse. Bringing clarity

and authority to a frequently misunderstood concept, Ball foresees trillions of dollars in new value—and the radical reshaping of society.

A Clinician's Guide to Teaching Mindfulness Causey Enterprises, LLC

This book explores ways in which libraries can reach new levels of service, quality, and efficiency while minimizing cost by collaborating in acquisitions. In consortial acquisitions, a number of libraries work together, usually in an existing library consortia, to leverage size to support

acquisitions in each individual library. In cross-functional acquisitions, acquisitions collaborates to support other library functions. For the library acquisitions manager, technical services manager, or the library director, awareness of different options for effective consortial and cross-functional acquisitions allows for the optimization of staff and resources to reach goals. This work presents those options in the form of case studies as well as useful analysis of the benefits and challenges of each. By supporting each other's acquisitions services in a consortium, libraries leverage size to get better prices, and share systems and expertise to maximize resources while minimizing costs. Within libraries, the acquisitions function can be

combined with other library functions in a unit with more than one purpose, or acquisitions can develop a close working relationship with another unit to support their work. This book surveys practice at different libraries and at different library consortia, and presents a detailed description and analysis of a variety of practices for how acquisitions units support each other within a consortium, and how they work with other library units, specifically collection management, cataloging, interlibrary loan, and the digital repository, in the form of case studies. A final section of the book covers fundamentals of collaboration.

Want to be an expert on Triumph's 350 and

500 unit-construction twins? Here is everything you need to know about these classic machines. Alongside the headline-grabbing bikes – the Bonneville and Trident – Triumph built a whole series of smaller 350/500cc machines, with all the style of their bigger brothers, but lighter in weight, easier to ride and now cheaper to buy. The Triumph 350/500s played a key role in the company's success through the 1960s, in North America as well as the UK. The range included everything from the original 350cc 3TA, a mild mannered tourer, to the final Daytona Tiger 500 (a modified version of which won the Daytona 500 race in 1967), and the TR5T trail bike. This comprehensive book covers the complete history of these bikes, with details of model variants, advice on buying and living with a Triumph 350/500, technical specifications, and a list of useful contacts.

The classic work on the evaluation of city form. What does the city's form actually mean to the people who live there? What can the city planner do to make the city's image more vivid and memorable to the city dweller? To answer these questions, Mr. Lynch, supported by studies of Los Angeles, Boston, and Jersey City, formulates a new criterion—imageability—and shows its potential value as a guide for the building and rebuilding of cities. The wide scope of this study leads to an original and vital method for the evaluation of city form. The architect, the planner, and certainly the city dweller will all want to read this book.
