Property management of off-highway vehicle (OHV) trails is one of the most important tasks for trail managers today. Title 36 of the Code of Federal Regulation Part 212.1, the Forest Service defines an OHV as any motor vehicle designed for or capable of cross-country travel on or immediately over land, water, sand, snow, ice, or marsh, swamp, or other natural terrain. In this report, off-highway vehicles, OVH, include everything from dirt bikes to swamp buggies, off-road vehicles, off-highway motorcycles, all-terrain vehicles, utility-terrain vehicles, four-wheel drive vehicles, such as pickup trucks and sport utility vehicles, and tracked vehicles. This illustrated report takes into consideration trail guidelines, fundamentals, assessments, management objectives, and layouts to reinforce the management framework presented to help OHV managers develop sustainable trails and protect the environment of surrounding trails. This framework provides a step-by-step approach to OHV trail management, incorporating sustainable design and management concepts with traditional trail management expertise and modern technological tools. Forest service and land management personnel, including farmers and ranchers that may utilize and manage multiple off-highway vehicles may be interested in this report. Military Review

Administering the National Health Service (NHS) is asking to navigate without reliable and sufficient information. It is amazing how a national service costing more than £ 15,000M (1984) and employing more than 1 million has existed since 1948. It is likely that with better appropriate data there could be economies and great efficiency and effectiveness. Paradoxically there is much data on the NHS, published and unpublished, that has remained unexploited and unused. In this book we have taken up the challenges of showing the availability of data and its presentation so that clinicians, adminis trators, committee members and politicians can better understand the state and needs of the NHS. Why this book? Because it is not possible to make decisions without facts. There is too much data around that is unrelated to the needs of clinicians, administrators, committee members and politicians. It can be brought together to provide bases for de cisions and, more important, to show the gaps that exist and the need for more information. What does it contain? It includes social and demographic data, NHS facts and figures, manpower data on the use of the NHS and some examples of how quality can be assessed and promoted.
