The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative

fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others?

From the preeminent writer of Taiwanese nativist fiction and the leading translator of Chinese literature come these poignant accounts of everyday life in rural and small-town Taiwan. Huang is frequently cited as one of the most original and gifted storytellers in the Chinese language, and these selections reveal his genius. In "The Two Sign Painters," TV reporters ambush two young workers from the country taking a break atop a twenty-four-story building. "His Son's Big Doll" introduces the tortured soul inside a walking advertisement, and in "Xiaoqi's Cap" a dissatisfied pressure-

cooker salesman is fascinated by a young schoolgirl. Huang's characters -- generally the uneducated and disadvantaged who must cope with assaults on their traditionalism, hostility from their urban brethren and, of course, the debilitating effects of poverty -- come to life in all their human uniqueness, free from idealization.
