Automakers are as prone to turn out clunkers as politicians are to lie. Their cars may be ugly, misconceived, badly built, diabolical to drive, ridiculously thirsty, or just plain unreliable. So which were the worst of the past 20 years?

Driving from Japan

Drifting is the newest, most

exciting motorsport we have seen in the United States since the invention of the limited slip differential - it may be the most exhilarating contest of man and machine ever devised! From the winding mountain passes and desolate industrial roads of Japan, this unique sport of sliding a car sideways through a series of corners has become a huge hit in America. Drifting, or dorifto as they call it in Japan, extracts the most exciting aspect auto racing, extreme oversteer, and makes it the focus of an intense and visually intoxicating new motor sport. How to Drift: The Art of Oversteer is a comprehensive guide to both the driving technique and car setup required for drifting. The author defines various precision driving techniques

used in drifting and explains them from a racecar driver's point of view. How to Drift illustrates the finer elements of car control required in drifting with technical descriptions, detailed line art and intense photography. This book even includes a budget drift car build-up with detailed suspension, chassis, and engine modifications that will help you turn your economy car into a drift machine— on top of that, there's a chapter detailing the finer aspects of an SR20DET swap! New edition of the definitive international history of Mazda's extraordinarily successful Wankel-engined coupes & roadsters right up to the end of production and the introduction of the RX-8. This book gives advice on buying your own RX-7, and covers the RX-7 in motorsport, as well as listing production figures. Mazda launched its first rotary-engined car - the Cosmo - in 1966 and was the only car manufacturer to solve the major problems associated with Wankel's radical engine design so that the unit's potential could be exploited and enjoyed. Launched in 1978, the RX-7 provided effortless and uncannily smooth performance, attributes that endeared the model to

enthusiasts through three generations of production. With each reincarnation the RX-7 became more of a Grand Tourer and less of a sportscar (a mantle handed on to the MX-5/Miata); global sales reduced as the car moved upmarket until, in the new millennium, the model was only sold in its native Japan. Heavily illustrated with good quality colour photographs, this book provides an in-depth insight into this amazing production automobile. "A must have for any RX7 enthusiast."

The wedge-shaped V12 Lamborghini flagships were always spectacular - in shape, sound and performance. The Murciélago was an evolution of the Countach and the Diablo, and was as iconic in its time as its illustrious predecessors were in theirs. This book examines the Murcielago in detail, while casting a look back through Lamborghini's troubled history, to understand how the Murciélago came into being.

Ferruccio Lamborghini, Patrick Minram, Megatech, Chrysler, and finally VW-

Audi, all played their part in the birth of this modern classic. The book touches on the people and organisations involved in the production of this iconic car, before examining each of the model variants, and discusses the joys and tribulations of ownership.

V10 Vixen a Woman's View on Motoring CRC Press

The transport sector continues to shift towards alternative powertrains, particularly with the UK Government's announcement to end the sale of petrol and diesel passenger cars by 2030 and increasing support for alternatives. Despite this announcement, the internal combustion continues to play a significant role both in the passenger car market through the use of hybrids and sustainable low carbon fuels, as well as a key role in other sectors such as heavy-duty vehicles

and off-highway applications across the globe. Building on the industry-leading IC Engines conference, the 2021 Powertrain Systems for Net-Zero Transport conference (7-8 December 2021, London, UK) focussed on the internal combustion engine's role in Net-Zero transport as well as covered developments in the wide range of propulsion systems available (electric, fuel cell, sustainable fuels etc) and their associated powertrains. To achieve the net-zero transport across the globe, the life-cycle analysis of future powertrain and energy was also discussed. Powertrain Systems for Net-Zero Transport provided a forum for engine, fuels, e-machine, fuel cell and powertrain experts to look closely at developments in powertrain technology required, to meet the demands of the net-zero future and global competition in all sectors of the

road transportation, off-highway and stationary power industries.
