Minidoka Revisited, a powerful compilation of the vibrant work of artist Roger Shimomura, chronicles experiences of racial and ethnic stereotyping endured by Asian Americans in recent history. From the incarceration of Japanese Americans during World War II, to contemporary everyday instances of cultural insensitivity, Shimomura's vivid, pointed works reflect one Japanese American's response to a sometimes hostile American culture. Minidoka Revisited prompts its readers to question past actions, to consider current political environments, and to explore the safety of their own individuality within contemporary America. The paintings included span twenty-five years of Shimomura's work. Selections from his earlier series, including Minidoka Diary, and American Diary, chronicle his family's experiences leading up to and during their internment, with roughly 10,000 other Japanese Americans from the Pacific Northwest, at the Minidoka Relocation Center in south-central Idaho. Selections from his more recent series, including Stereotypes and Admonitions, reveal "snapshots and stories" of experiences of racial and ethnic insensitivity and discrimination faced today by the artist and other Asian Americans. Through accompanying essays and analysis, Minidoka Revisited invites us to consider how issues of stereo-typing have impacted America and its diverse citizenry, and how the very same issues continue to resonate in a post-9/11 world.

In Afro-Blue, Tony Bolden traces the ways innovations in black music and poetry have driven the evolution of a variety of other American vernacular artistic forms. The blues tradition, Bolden demonstrates, plays a key role in the relationship between poetry and vernacular expressive forms. Through an analysis of the formal qualities of black poetry and music, Afro-Blue shows that they function as a form of resistance, affirming the values and style of life that oppose bourgeois morality. Even before the term blues had cultural currency, the inscriptions of style and resistance embodied in the blues tradition were already a prominent feature of black poetics. Bolden delineates this interrelation, examining how poets extend and reshape a variety of other verbal folk forms in the same way as blues musicians play with other musical genres. He identifies three distinct bodies of blues poetics: some poets mimic and riff on oral forms, another group fuse their dedication to vernacular culture with a concern for literary conventions, while still others opt to embody the blues poetics by becoming blues musicians - and some combine elements of all three.

In the 1930s and 1940s a band of smart and able young men--Thomas G. Corcoran, Benjamin V. Cohen, William O. Douglas, Abe Fortas, and James Rowe--helped Franklin D. Roosevelt build the modern American state and a progressive political coalition that seemed invincible.

These junior officers of the New Deal numbered among their favorite members of Congress the young Lyndon B. Johnson of Texas. For thirty years, through LBJ's own presidency, they functioned as his intimate "kitchen cabinet." Michael Janeway grew up with an insider view of these brokers of ideas and power because his father, economist and journalist Eliot Janeway, was a member of their circle. Janeway crafts a riveting account of how these men worked together to fuse reform impulses in the social sciences and law with political advancement. Can a progressive coalition of ideas and power come together again? The Fall of the House of Roosevelt makes such a prospect both alluring and daunting.

Estelle Thompson is one of the most highly regarded painters of her generation. In her latest works -- many published here for the first time -- her rigorous pursuit of order in abstraction has led her to the laying down of color in stripes that seem to pulsate with life, hovering above the ground on which they are painted, escaping any association with form. Denying the viewer a point of focus, dazzling the eye in a manner reminiscent of the work of Bridget Riley, Thompson's work nonetheless appeals to the emotions as well as to the intellect. Color, above all, establishes the mood of each picture, in combinations that are complex and sometimes shockingly vivid. Her paintings are about light: light suggested, light contained, light reflected. Initially, Thompson saw her work, although abstract, as located within the Northern European landscape tradition; in her latest pieces, the references are broader, the placing less specific. This, the first monograph on the artist, offers an authoritative critical

text and full-color reproductions of works from every stage of her career.

This is a uniquely detailed guide to the theory and practice of audio power amplifiers, from the elegantly simple mathematics of the differential pair to the practicalities of bolting down power transistors without breaking them. Based on a large body of original research and twenty years of experience, this work provides the first authoritative exposition of power amplifier design and operation. It shows that much of the conventional wisdom is quite wrong, and supplies practical solutions to many intractable design problems. Douglas Self has compiled a handbook for professional designers, amateur enthusiasts, academic investigators and students. This work is the first of its kind in the audio amplifier field, and has become the standard against which other works will be measured. It provides a clear and practical text on the state of the art of amplifier design. The book includes the first complete explanation of the sources of power amplifier distortion, shows how they can be eliminated or minimised, and gives detailed information allowing power amplifiers to be designed and constructed, with performance figures that would have been thought impossible a few years ago. It also includes an unusually detailed and lucid account of the operation of negative feedback in amplifiers, making it an excellent text for teaching as well as a key source for design engineers. Douglas Self is Chief Design Engineer at Soundcraft Electronics, a major audio manufacturing company. While much of his time is spent designing professional analog mixing consoles, he has also been deeply involved with power amplifiers, DSP programming for digital audio, and just about every branch of audio electronics. His latest power amplifier design, for the Spirit branch of Soundcraft, has exceeded twenty thousand units sold world-wide; a strong validation of the design methods in this book!
