Minidoka Revisited, a powerful compilation of the vibrant work of artist Roger Shimomura, chronicles experiences of racial and ethnic stereotyping endured by Asian Americans in recent history. From the incarceration of Japanese Americans during World War II, to contemporary everyday instances of cultural insensitivity, Shimomura's vivid, pointed works reflect one Japanese American's response to a sometimes hostile American culture. Minidoka Revisited prompts its readers to question past actions, to consider current political environments, and to explore the safety of their own individuality within contemporary America. The paintings included span twenty-five years of Shimomura's work. Selections from his earlier series, including Minidoka Diary, and American Diary, chronicle his family's experiences leading up to and during their internment, with roughly 10,000 other Japanese Americans from the Pacific Northwest, at the Minidoka Relocation Center in south-central Idaho. Selections from his more recent series, including Stereotypes and Admonitions, reveal "snapshots and stories" of experiences of racial and ethnic insensitivity and discrimination faced today by the artist and other Asian Americans. Through accompanying essays and analysis, Minidoka Revisited invites us to consider how issues of stereo-typing have impacted America and its diverse citizenry, and how the very same issues continue to resonate in a post-9/11 world.

Dylan Thomas's expressive, highly imaginative re-creation of forms and language intimately portrays his inner self and his time, earning him renown as one of the "great individualists of modern art." In this contemplative, focused study of poems, stories and other works by Thomas, including Portrait of the Artist as a Young Dog and Under Milk Wood, Barbara Hardy emphasizes his creative achievements and high intelligence, analyzing his regional identity; response to other writers, especially James Joyce; modernist style; subject matter; use of language; and themes of art and the natural world. Thomas, a Welsh writer, never a nationalist, put into his writing a subtle response to regional landscape, particular people and places, and social context, including the 1930s depression, rural poverty, and war. His poetry and prose are passionate, sensuous, and artistically self-aware. The poetry is especially congenial in its imaginative celebration of greenness--literal, metaphorical, and political. To adapt the words of Charles Lamb, the poet is in "love with this green earth." Hardy describes Thomas as a resourceful "language-changer" who, like Shakespeare, Dickens, Hopkins, and Joyce, transforms the English language. Through writing so uniquely inventive that it alters the reader's perception of language, Thomas left us with works that are as fresh and relevant to today's world as they were at their debut.

salmon runs and the Florida everglades to South Pacific coral reefs and the bleak Tibetan plateau. The result is that rare book that bridges the cultures of science and art. Lyrical, vivid portraits of natural wonders and the threats to them are combined with precise scientific accounts of natural processes and their disturbances. The Green Fuse will show nonscientists the fascination of ecological detective work and renew scientists' love for the beauty of the world under their microscopes. Harte's stories illuminate, without sermonizing, the damage to natural systems brought about by technological hubris and calculated political ruthlessness. "The green fuse" symbolizes the basic unity behind natural diversity. But a fuse may also be the weak link in an overloaded system or the slow burning wick on an ecological bomb. As The Green Fuse reminds us, the energies that created human liberation from nature can also be those that lead to the human destruction of nature. Estelle Thompson is one of the most highly regarded painters of her generation. In her latest works -- many published here for the first time -- her rigorous pursuit of order in abstraction has led her to the laying down of color in stripes that seem to pulsate with life, hovering above the ground on which they are painted, escaping any association with form. Denying the viewer a point of focus, dazzling the eye in a manner reminiscent of the work of Bridget Riley, Thompson's work nonetheless appeals to the emotions as well as to the intellect. Color, above all, establishes the mood of each picture, in combinations that are complex and sometimes shockingly vivid. Her paintings are about light: light suggested, light contained, light reflected. Initially, Thompson saw her work, although abstract, as located within the Northern European landscape tradition; in her latest pieces, the references are broader, the placing less specific. This, the first monograph on the artist, offers an authoritative critical text and full-color reproductions of works from every stage of her career.

In Afro-Blue, Tony Bolden traces the ways innovations in black music and poetry have driven the evolution of a variety of other American vernacular artistic forms. The blues tradition, Bolden demonstrates, plays a key role in the relationship between poetry and vernacular expressive forms.

Through an analysis of the formal qualities of black poetry and music, Afro-Blue shows that they function as a form of resistance, affirming the values and style of life that oppose bourgeois morality. Even before the term blues had cultural currency, the inscriptions of style and resistance embodied in the blues tradition were already a prominent feature of black poetics. Bolden delineates this interrelation, examining how poets extend and reshape a variety of other verbal folk forms in the same way as blues musicians play with other musical genres. He identifies three distinct bodies of blues poetics: some poets mimic and riff on oral forms, another group fuse their dedication to vernacular culture with a concern for literary conventions, while still others opt to embody the blues poetics by becoming blues musicians - and some combine elements of all three.

Engineering Analysis of Fires and Explosions demonstrates how professional forensic engineers apply basic concepts and principles from engineering and scientific disciplines to analyze fires and explosions. It describes how forensic engineers use a "reverse design" process to determine the original cause of a fire or explosion. This guide incorporates practices and lessons learned from the first-hand experiences of the author and his colleagues. It is an exciting introduction to the multidisciplinary subject of fire and explosion analysis and its legal ramifications. The author's straightforward language and style make the concepts easy to understand.
