An introduction to the engineering principles of embedded systems, with a focus on modeling, design, and analysis of cyber-physical systems. The most visible use of computers and software is processing information for human consumption. The vast majority of computers in use, however, are much less visible. They run the engine, brakes, seatbelts, airbag, and audio system in your car. They digitally encode your voice and construct a radio signal to send it from your cell phone to a base station. They command robots on a factory floor, power generation in a power plant, processes in a chemical plant, and traffic lights in a city. These less visible computers are called embedded systems, and the software they run is called embedded software. The principal challenges in designing and analyzing embedded systems stem from their interaction with physical processes. This book takes a cyber-physical approach to embedded systems, introducing the engineering concepts underlying embedded systems as a technology and as a subject of study. The focus is on modeling, design, and analysis of cyber-physical systems, which integrate computation, networking, and physical processes. The second edition offers two new chapters, several new exercises, and other improvements. The book can be used as a textbook at the advanced undergraduate or introductory graduate level and as a professional reference for practicing engineers and computer scientists. Readers should have some familiarity with machine structures, computer programming, basic discrete mathematics and algorithms, and signals and systems.

Ton Up! A Century of Caf é Racer Speed and Style focuses on the story of the ton-up boys and their caf é racers. But it's much more than just that. Illustrated with historic and modern photos and featuring a text by one of the world ' s motorcycle historians, it's really the story of motorcycle speed and style evolved from the early 1900s right through today. Cafe racers are most associated with the young, rebellious rock-and-rollers of 1960s Britain. These riders created the quintessential caf é racers—fast motorcycles customized to resemble the racing bikes of the period. They were called “ caf é racers ” because their riders raced on public roads, from one caf é to the next. The goal was to do “ the ton ” (exceed 100 miles per hour) on these runs, which led to their designation as “ ton-up boys. ” Today, ton-up culture is more popular than ever and recognized worldwide with a following of young and long-time riders alike.With Ton Up!, enjoy a scenic ride through the history of this vibrant scene.

The USAF "Thunderbirds" flew the McDonnell Douglas F-4E Phantom II aircraft from 1969 through 1973. This aircraft, arguably the best fighter aircraft of its time, was used extensively in the Vietnam War. The Thunderbirds used eleven of these machines. Two of them were lost to crashes, but nine remained for posterity. All but two are on display throughout the country. This book chronicles an exciting motorcycle trip by the author, a Thunderbird who flew in these aircraft during 1970-1972, to visit all of the remaining nine phantoms. His coast-to-coast journey covered nearly 8,000 miles and provided an endless array of wonder and a bottomless well of memories. Filled with scores of color images, it details the vistas, events and thoughts that constantly bombarded the authors senses as he pursued his quest to visit old friends from the past.
