Principles of International Criminal Law has become one of the most influential textbooks in the field of international criminal justice. It offers a systematic and comprehensive analysis of the foundations and general principles of substantive international criminal law, including thorough discussion of its core crimes. It provides a detailed understanding of the general principles, sources, and evolution of international criminal law, demonstrating how it has developed, and how its application has changed. After establishing the general principles, the book assesses the four key international crimes as defined by the statute of the International Criminal Court: genocide, crimes against humanity, war crimes, and the crime of aggression. This new edition revises and updates work with developments in international criminal justice since 2009. It includes new material on the principle of culpability as one of the fundamental principles of international criminal law, the

notion of terrorism as a crime under international law, the concept of direct participation in hostilities, the problem of so-called unlawful combatants, and the issue of targeted killings. The book retains its highly-acclaimed systematic approach and consistent methodology, making the book essential reading for both students and scholars of international criminal law, as well as for practitioners and judges working in the field.

Crime, Violence, and Global Warming introduces the many connections between climate change and criminal activity. Conflict over natural resources can escalate to state and non-state actors, resulting in wars, asymmetrical warfare, and terrorism. Crank and Jacoby apply criminological theory to each aspect of this complicated web, helping readers to evaluate conflicting claims about global warming and to

analyze evidence of the current and potential impact of climate change on conflict and crime. Beginning with an overview of the science of global warming, the authors move on to the links between climate change, scarce resources, and crime. Their approach takes in the full scope of causes and consequences, present and future, in the United States and throughout the world. The book concludes by looking ahead at the problem of forecasting future security implications if global warming continues or accelerates. This fresh approach to the criminology of climate change challenges readers to examine all sides of this controversial question and to formulate their own analysis of our planet ' s future.

Like so many of us, Margret Kopala lost a significant portion of her life savings in the stock market crash of 2008. Unlike us, however, she went on a long and intense financial odyssey to find out what caused the losses and what she could do to protect herself in the future. Armed with her skills as a journalist and public policy analyst, fueled by equal measures of fear and determination, and mentored by successful investment strategist and financial broadcaster John Budden, Kopala researched and wrote this magisterial analysis of how Russian economist Nikolai Kondratieff's long-wave theory is playing out in what many today describe as a financial Winter. Along the way, she is introduced to financial experts familiar with Kondratieff scholarship. John Budden's interviews in the book with Dean LeBaron, J. This book critically examines the role of think tanks as foreign policy actors. It looks at the origins and development of foreign policy think tanks in India and their changing relevance and position as agents within the policy-making process. The book

uses a comparative framework and explores the research discourse of prominent Indian think tanks, particularly on the India – Pakistan dispute, and offers unique insights and perspectives on their research design and methodology. It draws attention to the policy discourse of think tanks during the Composite Dialogue peace process between India and Pakistan and the subsequent support from the government which further expanded their role. One of the first books to offer empirical analyses into the role of these organisations in India, this book highlights the relevance of and the crucial role that these institutions have played as non-state policy actors. Insightful and topical, this book will be of interest to

researchers focused on international relations, foreign policy analysis and South Asian politics. It would also be a good resource for students interested in a theoretical understanding of foreign policy institutions in general and Indian foreign policy in particular.

This book contains the Proceedings of EUROCK 2013 - The 2013 ISRM International Symposium, which was held on 23-26 September 2013 in Wroclaw, Poland. The Symposium was organized by the ISRM National Group POLAND and the Institute of Geotechnics and Hydrotechnics of the Wroclaw Institute of Technology. The focus of

the Symposium was on recent developments in the field of environmental management and provides a broad focus on the theoretical and methodological underpinnings of environmental management. Provides an up-to-date survey of the field from the perspective of different disciplines. Covers the topic of environmental management from multiple perspectives, namely, natural sciences, engineering, business, social sciences, and methods and tools perspectives. Combines both academic rigor and practical approach through literature reviews and theories and examples and case studies from diverse geographic areas and policy domains. Explores local and global issues of environmental management

and analyzes the role of various contributors in the environmental management process. Chapter contents are appropriately demonstrated with numerous pictures, charts, graphs, and tables, and accompanied by a detailed reference list for further readings.

This is the first full-length study of how colour intersected with polity, society and economy in the nineteenth century South. Although legal historians have explored how early Americans legally defined and contested race, that literature has overlooked or downplayed the middle ground occupied by a sizeable mixed-race population of antebellum free people. These were the 'talented tenth' long before W.E.B. Dubois coined the term.

The UK's engagement with the legal protection of human rights at a European level has been, at varying stages, pioneering, sceptical and antagonistic. The UK government, media and public opinion have all at times expressed concerns about the growing influence of European human rights law, particularly in the controversial contexts of prisoner voting and deportation of suspected terrorists as well as in the context of British military action abroad. British politicians and judges have also, however, played important roles in drafting, implementing and interpreting the European Convention on Human Rights. Its incorporation into domestic law in the Human Rights Act 1998 intensified the ongoing debate about the UK's international and regional

human rights commitments. Furthermore, the increasing importance of the European Union in the human rights sphere has added another layer to the relationship and highlights the complex relationship(s) between the UK government, the Westminster Parliament and judges in the UK, Strasbourg and Luxembourg. The book analyses the topical and contentious issue of the relationship between the UK and the European systems for the protection of human rights (ECHR and EU) from doctrinal, contextual and comparative perspectives and explores factors that influence the relationship of the UK and European human rights.

Derived from the renowned multi-volume International Encyclopaedia of Laws, this book provides ready access to legislation and practice

concerning the environment in Denmark. A general introduction covers geographic considerations, political, social and cultural aspects of environmental study, the sources and principles of environmental law, environmental legislation, and the role of public authorities. The main body of the book deals first with laws aimed directly at protecting the environment from pollution in specific areas such as air, water, waste, soil, noise, and radiation. Then, a section on nature and conservation management covers protection of natural and cultural resources such as monuments, landscapes, parks and reserves, wildlife, agriculture, forests, fish, subsoil, and minerals. Further treatment includes the application of zoning and land-use planning, rules on liability, and administrative and judicial remedies to environmental issues. There is also an analysis

of the impact of international and regional legislation and treaties on environmental regulation. Its succinct yet scholarly nature, as well as the practical quality of the information it provides, make this book a valuable resource for environmental lawyers handling cases affecting Denmark. Academics and researchers, as well as business investors and the various international organizations in the field, will welcome this very useful guide, and will appreciate its value in the study of comparative environmental law and policy.

In May 1998, in reaction to India ' s nuclear weapons tests, Pakistan tested six nuclear weapons. Following this, the country opted for a policy of minimum deterrence, and within a year Pakistan had altered its policy stance by adding the modifier of minimum ' credible ' deterrence.

This book looks at how this seemingly innocuous shift

seriously impacted on Pakistan ' s nuclear policy direction and whether the concept of minimum has lost its significance in the South Asian region ' s changed/changing strategic environment. After providing a brief historical background exploring why and how Pakistan carried out the nuclear development program, the book questions why Pakistan could not sustain the minimum deterrence that it had conceptualized in the immediate aftermath of the 1998 test. It examines the conceptual theoretical framework of the essentials of minimum deterrence in order to question whether Pakistan ' s nuclear policy remained consistent with this, as well as to discover the rudimentary factors that are responsible for the

inconsistencies with regard to minimum deterrence conceived in this study. The book goes on to look at the policy options that Pakistan had after acquiring the nuclear capability, and what the rationale was for selecting minimum deterrence. The book not only highlights Pakistan deterrent force building, but also analyzes closely Pakistan ' s doctrinal posture of first use option. Furthermore, it examines the policy towards arms control and disarmament, and discusses whether these individual policy orientations are consistent with the minimum deterrence. Conceptually providing a deeper understanding of Pakistan ' s post-1998 nuclear policy, this book critically examines whether the minimum deterrence

conceived could be sustained both at the theoretical and operational levels. It will be a useful contribution in the field of Nuclear Policy, Security Studies, Asian Politics, Proliferation/Non-Proliferation Studies, and Peace Studies. This book will be of interest to policy makers, scholars, and students of nuclear policy, nuclear proliferation and arms control related research.

This collection empirically and conceptually advances our understanding of the intricacies of emerging markets ' financial and macroeconomic development in the post-2008 crisis context. Covering a vast geography and a broad range of economic viewpoints, this

study serves as an informed guide in the uncharted waters of fundamental uncertainty as it has been redefined in the post-crisis period. Contributors to the collection go beyond risks-opportunities analyses, looking deeper into the nuanced interpretations of data and economic categories as interplay of developing world characteristics in the context of redefined fundamental uncertainty. Those concerns relate to the issues of small country finance, the industrialization of the developing world, the role of commodity cycles in the global economy, sovereign debt, speculative financial flows and currency pressures, and connections between financial markets and real markets. Compact and comprehensive, this

collection offers unique perspectives into contemporary issues of financial deepening and real macroeconomic development in small developing economies that rarely surface in the larger policy and development debates.

While the outcomes of the tumultuous uprisings that continue to transfix the Arab world remain uncertain, the root causes of rebellion persist. Drawing upon extensive empirical research, *Lineages of Revolt* tracks the major shifts in the region's political economy over recent decades. In this illuminating and original work, Adam Hanieh explores the contours of neoliberal policies, dynamics of class and state formation, imperialism and the nature of regional accumulation, the

significance of Palestine and the Gulf Arab states, and the ramifications of the global economic crisis. By mapping the complex and contested nature of capitalism in the Middle East, the book demonstrates that a full understanding of the uprisings needs to go beyond a simple focus on “ dictators and democracy. ”

This book explores the college textbook publishing industry, from its inception in medieval universities, through the late 20th century, to the present day which has led to an existential crisis for some publishers. The various sections in this book offers a comprehensive analysis of the substantive developments, problems, and concerns about a myriad of major issues that confronted the higher education textbook sector after 2000. Chapters incorporate highly reliable textbook statistical sources as well as a review of some marketing theories utilized by these publishers (e.g., understanding the threat of substitute products; the sale of used and rental texts; the sale of new digital textbooks).

Global growth is expected to be 2.8 percent in 2015, but is expected to pick up to 3.2 percent in 2016-17. Growth in developing countries and some high-income countries is set to disappoint again this year. The prospect of rising borrowing costs will compound the challenges many developing countries are facing as they adapt to an era of low commodity prices. Risks to this outlook remain tilted to the downside. This edition of Global Economic Prospects includes two Special Features that analyze the policy challenges raised by the two transitions in developing countries: the risks associated with the first U.S. central bank interest rate increase since 2006 and the implications of persistently low commodity prices for low-income countries. Global Economic Prospects is a World Bank Group Flagship Report that examines global economic developments and prospects, with a special focus on developing countries, on a semiannual basis (in January and June). The January edition

includes in-depth analyses of topical policy challenges faced by developing countries while the June edition contains shorter analytical pieces.

Since Xi Jinping ' s accession to power in 2012, nearly every aspect of China ' s relations with Africa has grown dramatically. Beijing has increased the share of resources it devotes to African countries, expanding military cooperation, technological investment, and educational and cultural programs as well as extending its political influence. This book examines the full scope of contemporary political and security relations between China and Africa. David H. Shinn and Joshua Eisenman not only explain the specific tactics and methods that Beijing uses to build its

strategic relations with African political and military elites but also contextualize and interpret them within China's larger geostrategy. They argue that the priorities of Chinese leaders—including the conflation of threats to the Communist Party with threats to the country, a growing emphasis on relations in the Global South, and a focus on countering U.S. hegemony—have combined to elevate Africa's importance among policy makers in Beijing. Ranging from diplomacy and propaganda to arms sales and space cooperation, from increasingly frequent People's Liberation Army Navy port calls in Africa to the rising number of African students studying in China, this book marshals extensive and compelling qualitative and quantitative evidence of the deepening ties between China and Africa. Drawing on two decades of systematic data and

hundreds of surveys and in-person interviews, Shinn and Eisenman shed new light on the state of China-Africa relations today and consider what the future may hold. The Railway Preservation Revolution Academic Press

There is a growing interest in understanding how early years care and education is organised and experienced internationally. This book examines key influential approaches to early years care as well as some less well-known systems from around the world. In particular the book aims to: Inform those studying early years about perspectives in other countries Encourage critical thinking about issues, influences and the complexities of early years provision around the world Promote critical reflection on students' own provision and the current context of that provision Each chapter provides an overview of early

years provision and explores historical and current influences in context, as well as offering insights into daily life through short vignettes, longer case studies and commentary from practitioners. Whilst many approaches - such as Reggio Emilia, Te Whariki and Head Start - are widely admired, it is important for reflective practitioners to understand the motivation which gave rise to these influential approaches in their original context. Additionally, broadening understanding through information on less widely known systems, the book provides students with a good grounding in the international context of early years, the provenance of different early years approaches and principles, and the influences on their own countries' provision. Written in a straightforward and accessible style, the book is designed to meet the needs of students studying modules related to international perspectives on a range of foundation, bachelor and master's degrees in early years. Contributors: Verity Campbell-Barr, Federica Caruso, Carmen Dalli, Rebecca Carter Dillon, Annie Davy, Chandrika Devarakonda, Alena Drzalová, Hasina Banu Ebrahim, Susan Edwards, Dora Ho, Valerie Huggins, Anne Hunt, Kerstin Kööp, Éva Kovácsné Bakoski, Caroline Leeson, Beth Marshall, Nancy McDermott, Julia Morgan, Joce Nutall, Elin Eriksen Ødegaard, Philip Selbie, Paolo Sorzio, Manabu Sumida, Keang-ieng (Peggy) Vong, Karen Wickett "The book rightly challenges common assumptions about the value of Western perspectives of ECEC and skilfully enables the reader to recognize the various social, political and economic drivers

and processes that have shaped early years pedagogy on a global level. ” Dr Janet Rose, Early Years Education Award Leader, Bath Spa University, UK “ Given the ever increasing interest and importance of global early childhood education and care, this critically informed book offers valuable and challenging internationalised comparative arguments for students and academics at all levels. ” Dr Guy Roberts-Holmes, Senior Lecturer, Early Years and Primary Education Department, University of London, UK
