The Story of Jeep McFarland

From the resumption of automobile production at the close of World War II through the 1950s, the American auto industry would see the births and deaths of several manufacturers, great technological advances, and an era of dramatic styling as a prospering nation asserted its growing mobility. Cars of this period are among the most iconic vehicles ever built in the United States: the 1949 Ford, the remarkable Studebaker designs of 1950 and 1953, the 1955-1957 Chevrolets, the "Forward Look" Chrysler products, the ill-fated Edsel and many others. This comprehensive reference book details every model from each of the major manufacturers (including independents such as Kaiser-Frazer and Crosley but excluding very low-volume marques such as Tucker) from model years 1946 through 1959. Year by year, it provides an overview of the industry and market, followed by an individual report on each company: its main news for the year (introductions or cancellations of models, new engines and transmissions, advertising themes, sales trends etc.); its production figures and market status; and its powertrain offerings, paint colors and major options. The company's models are then detailed individually with such information as body styles, prices, dimensions and weights, standard equipment and production figures. Nearly 1,000 photographs are included.

Ready to turn your Jeep Cherokee XJ into a trail-worthy machine? Why not? With two available 4-wheel-drive systems, solid axles front and rear, and a torquey 4.0-liter straight 6, the Cherokee is a very capable machine, especially when it's modified the right way. This book isn't about cutting apart your Cherokee to build an over-the-top, off-road-only rock crawler (though you can take it there), and it isn't about building a jacked-up, chrome-covered show rig either. This book is about building a useful, capable Cherokee for mountains, the mud, the desert, the street, and everywhere in between. With the modifications explained on these pages, your Cherokee can take you and yours just about everywhere you want to go - and get you back safely. Author Eric Zappe explains how to upgrade your Cherokee's suspension, axles, differentials, engine, transfer case, wheels and tires, skid plates, and more, using aftermarket and salvage yard upgrades. Zappe even has special sections covering basic driving and recovery techniques, and a number of built-up Jeeps to give you ideas for your own Cherokee. Also included is a detailed account of a group of XJs making a run through the famous Rubicon trail.

SUVs have taken over America's roads. Ad campaigns promote them as safer and "greener" than ordinary cars and easy to handle in bad weather. But very little about the SUV's image is accurate. They poorly protect occupants and inflict horrific damage in crashes, they guzzle gasoline, and they are hard to control. Keith Bradsher has been at the forefront in reporting the calamitous safety and environmental record of SUVs, including the notorious Ford-Firestone rollover controversy. In High and Mighty, he traces the checkered history of SUVs, showing how they came to be classified not as passenger cars but as light trucks, which are subject to less strict regulations on safety, gas mileage, and air pollution. He makes a powerful case that these vehicles are even worse than we suspect--for their occupants, for other motorists, for pedestrians and for the planet itself. In the tradition of Unsafe at Any Speed and Fast Food Nation, Bradsher's book is a damning expos é of an industry that puts us all at risk, whether we recognize it or not.
