Eureka Math is a comprehensive, content-rich PreK-12 curriculum that follows the focus and coherence of the Common Core State Standards in Mathematics (CCSSM) and carefully sequences the mathematical progressions into expertly crafted instructional modules. The companion Study Guides to Eureka Math gather the

key components of the curriculum for each grade into a single location, unpacking the standards in detail so that both users and non-users of Eureka Math can benefit equally from the content presented. Each of the Eureka Math Curriculum Study Guides includes narratives that provide educators with an overview of what students should be learning throughout the year, information on alignment to the instructional shifts and the standards, design of curricular components, approaches to differentiated instruction, and descriptions of mathematical models. The Study Guides can serve as either a self-study professional development resource or as the basis for a deep group study of the standards for a

particular grade. For teachers who are new to the classroom or the standards, the Study Guides introduce them not only to Eureka Math but also to the content of the grade level in a way they will find manageable and useful. Teachers familiar with the Eureka Math curriculum will also find this resource valuable as it allows for a meaningful study of the grade level content in a way that highlights the coherence between modules and topics. The Study Guides allow teachers to obtain a firm grasp on what it is that students should master during the year. The Eureka Math Curriculum Study Guide, Grade 5 provides an overview of all of the Grade 5 modules, including Place Value and Decimal Fractions; Multi-

Digit Whole Number and Decimal Fraction Operations; Addition and Subtraction of Fractions; Multiplication and Division of Fractions and Decimal Fractions; Addition and Multiplication with Volume and Areal; Problem Solving with the Coordinate Plane.

Grade 5, Student Math Journal Evan Moor Educational Publishers
The Everyday Mathematics (EM) program was developed by the University of Chicago School Mathematics Project (UCSMP) and is now used in more than 185,000 classrooms by almost three million students. Its research-based learning delivers the kinds of results that all school districts aspire to. Yet despite that tremendous success, EM often leaves parents perplexed. Learning is accomplished not through rote memorization, but by actually engaging in real-life math tasks. The curriculum isn't linear, but rather spirals back and forth, weaving concepts in and out of lessons that build overall understanding and long-term retention. It's no wonder that many parents have difficulty navigating this innovative mathematical and pedagogic terrain. Now help is here. Inspired by UCSMP's firsthand experiences with parents and teachers, Everyday Mathematics for Parents will equip parents with an understanding of EM and enable them to help their children

with homework—the heart of the great parental adventure of ensuring that children become mathematically proficient. Featuring accessible explanations of the research-based philosophy and design of the program, and insights into the strengths of EM, this little book provides the big-picture information that parents need. Clear descriptions of how and why this approach is different are paired with illustrative tables that underscore the unique attributes of EM. Detailed guidance for assisting students with homework includes explanations of the key EM concepts that underlie each assignment. Resources for helping students practice math more at home also provide an understanding of the long-term utility of EM. Easy to use, yet jam-packed with knowledge and helpful tips, Everyday Mathematics for Parents will become a pocket mentor to parents and teachers new to EM who are ready to step up and help children succeed. With this book in hand, you'll finally understand that while this may not be the way that you learned math, it's actually much better.

Eureka Math Curriculum Study
Guide John Wiley & Sons
"... a curriculum geared toward
helping students gain skills in
consciously regulating their actions,
which in turn leads to increased
control and problem solving
abilities. Using a cognitive behavior
approach, the curriculum's learning
activities are designed to help
students recognize when they are
in different states called "zones,"
with each of four zones
represented by a different color. In
the activities, students also learn
how to use strategies or tools to
stay in a zone or move from one to
another. Students explore calming
techniques, cognitive strategies,
and sensory supports so they will
have a toolbox of methods to use to
move between zones. To deepen
students' understanding of how to
self-regulate, the lessons set out to
teach students these skills: how to

read others' facial expressions and
recognize a broader range of
emotions, perspective about how
others see and react to their
behavior, insight into events that
trigger their less regulated states,
and when and how to use tools and
problem solving skills. The
curriculum's learning activities are
presented in 18 lessons. To
reinforce the concepts being taught,
each lesson includes probing
questions to discuss and
instructions for one or more
learning activities. Many lessons
offer extension activities and ways
to adapt the activity for individual
student needs. The curriculum also
includes worksheets, other
handouts, and visuals to display and
share. These can be photocopied
from this book or printed from the
accompanying CD."--Publisher's
