Spectrum Test Prep, Grade 5 Carson Dellosa Publishing Company

ABSTRACT: The purpose of this non-experimental, causal-comparative study was to examine how gender, reading ability, and mathematics ability differentially moderated students' mathematical problem-solving processes, linguistic explanations of those solution processes, achievement on a mathematical problem-solving test, self-efficacy on a self-reported rating scale, and self-assessment on a self-reported rating scale. The investigation addressed five research questions. First, to what extent are students' mathematical problem-solving processes related to gender? Second, to what extent is children's performance in mathematical problem solving related to gender, reading ability, and mathematics ability? Third, to what extent is the quality of students' linguistic explanations of their problem-solving processes related to gender, reading ability and mathematics ability? Fourth, to what extent is the relationship between students' feelings of self-efficacy when commencing work on a mathematical problem and their actual performance related to gender, reading ability and mathematics ability? Finally, to what extent is students' ability to assess their own performance on mathematical problem-solving tasks related to gender, reading ability, and mathematics ability? After being briefed in the use of the self-efficacy and self-assessment reporting scales, the students from 16 fifth-grade classrooms were tested with a 12-item mathematical problem-solving test. The final sample consisted of 237 students, 129 boys and 108 girls. All student responses were scored for performance and linguistic explanation using holistic rubrics, and were coded according to the solution process employed. The results indicate that gender does not play a significant role in students' choice of problem-solving processes. As expected, mathematics ability was significantly related to performance as was reading ability. Gender was not found to be a significant predictor of performance. Reading ability and mathematics ability were both strongly related to the quality of students' linguistic explanations of their problem-solving processes, but gender was not. Boys consistently exhibited higher levels of self-efficacy, but girls were more accurate in their self-efficacy feelings. Reading ability was also found to be a significant predictor of the accuracy of students' self-efficacy feelings, but mathematics

ability was not. Reading ability was found to be the strongest predictor of the accuracy of students' self-assessment, with gender also showing a significant relationship.

This book is an amazing resource for teachers who are struggling to help students develop both procedural fluency and conceptual understanding.. --Dr. Margaret (Peg) Smith, co-author of *5 Practices for Orchestrating Productive Mathematical Discussions* Robert Kaplinsky, the co-creator of Open Middle math problems, brings his new class of tasks designed to stimulate deeper thinking and lively discussion among middle and high school students in *Open Middle Math: Problems That Unlock Student Thinking, Grades 6-12*. The problems are characterized by a closed beginning, - meaning all students start with the same initial problem, and a closed end, - meaning there is only one correct or optimal answer. The key is that the middle is open- in the sense that there are multiple ways to approach and ultimately solve the problem. These tasks have proven enormously popular with teachers looking to assess and deepen student understanding, build student stamina, and energize their classrooms. Professional Learning Resource for Teachers: *Open Middle Math* is an indispensable resource for educators interested in teaching student-centered mathematics in middle and high schools consistent with the national and state standards. *Sample Problems at Each Grade: The book demonstrates the Open Middle concept with sample problems ranging from dividing fractions at 6th grade to algebra, trigonometry, and calculus. Teaching Tips for Student-Centered Math Classrooms: Kaplinsky shares guidance on choosing problems, designing your own math problems, and teaching for multiple purposes, including formative assessment, identifying misconceptions, procedural fluency, and conceptual understanding. Adaptable and Accessible Math: The tasks can be solved using various strategies at different levels of sophistication, which means all students can access the problems and participate in the conversation. Open Middle Math will help math teachers transform the 6th -12th grade classroom into an environment focused on problem solving, student dialogue, and critical thinking.*
