This book takes a
fresh look at
programs for advanced
studies for high
school students in
the United States,
with a particular
focus on the Advanced
Placement and the

International

programs, and asks
how advanced studies
can be significantly
improved in general.
It also examines two
of the core issues
surrounding these
programs: they can
have a profound
impact on other
components of the
education system and
participation in the
programs has become
key to admission at
selective
institutions of

higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can

be used to guide advanced study programs.
