Effective response to misuse or abusive activity in IT systems requires the capability to detect and understand improper activity. Intrusion Detection Systems observe IT activity, record these observations in audit data, and analyze the collected audit data to detect misuse. Privacy-Respecting Intrusion Detection introduces the concept of technical purpose binding, which restricts the linkability of pseudonyms in audit data to the amount necessary for misuse detection. Also, it limits the recovery of personal data to pseudonyms involved in a detected misuse scenario. The book includes case studies demonstrating this theory, and solutions that are constructively validated by providing algorithms.

'What if teachers were owners, not employees?' Teacher-ownership is a revolutionary way to put excitement and meaning back into the teaching profession and to revitalize public education. This book demonstrates how being an owner rather than an employee can give teachers control of their professional activity, including full responsibility and accountability for creating and sustaining high performing learning communities. It presents examples of teacher-ownership in practice and provides practical models for those who would like to experience the professional satisfaction found in ownership. Like doctors, lawyers, and other professionals, teachers

have the same opportunity to work for themselves through ownership of professional partnerships. In a professional partnership, the teachers are the leaders and decision-makers. They control their own work and their own relationships to students, including determining curriculum, setting the budget, choosing the level of technology available to students, determining their own salaries, selecting their colleagues, monitoring performance and hiring administrators to work for them, not vice versa.
