The essays in Staging the Renaissance show the theatre to be the site of a rich confluence of cultural forces, the place where social meanings are both formed and transformed. The volume unites some of the most challenging issues in contemporary Renaissance studies and some of our best-known critics, including Stephen Orgel, Margaret Ferguson, Catherine Belsey, Jonathan Goldberg, Marjorie Garber, Lisa Jardine, and Jonathan Dollimore-- demonstrating the variety and vitality not only of contemporary criticism, but of Renaissance drama itself.

Nationalism, ethnicity and citizenship lie at the heart of many of the societal changes that are currently transforming countries across the world. Global migration has undermined old certainties provided by the established framework of nation-states, with inward migration, cultural diversity and transnational affiliations having become established facts of life in many countries. These phenomena raise significant challenges for traditional conceptions of citizenship. This book provides a detailed examination, from a variety of disciplinary perspectives, of contemporary issues relating to nationalism, ethnicity and citizenship. The book aims to take stock of current understandings in this area, and to establish whether there are connections between the understandings that are being articulated within different social science disciplines. The contributors, who are all senior international figures in their respective fields, are drawn from a range of disciplines, including Politics, Sociology, Communication/Media, Geography, Psychology and Education. Collectively, they address the following specific questions: • To what extent do multiculturalism and transnationalism undermine nationalism or, on the contrary, provoke its reassertion? • How do the multiple identities and multiple levels of belonging experienced today interact with traditional nationalist ideology? • Within multicultural societies, how far do representations of 'cultural others' still play a role in nationalist constructions of 'the nation'? • How successfully have the welfare systems of nation-states responded to the influx of migrants? • How have national politicians responded to the cultural diversity of their own countries and have they moved beyond the traditional logic of nationalism within their thinking? • Why are extreme right-wing parties gaining increased levels of support? • What social and psychological resources do citizens require in order to function effectively at the political level within multicultural democratic societies? • How can the educational systems of states, which have traditionally been used for nationalist purposes, be harnessed to enhance the competences needed by their citizens for successful living in multicultural societies? • What changes need to be made to educational policies in order to ensure the effective integration of minority citizens? Despite the fact that they have been written from different disciplinary perspectives, the various chapters in this book paint a consistent picture. They offer a view of a world in which nationalism is still very much a dominant ideology which configures the discourse and thinking of citizens and politicians alike about nation-states, ethnic diversity, multiculturalism and citizenship. The crucial role of education is also highlighted, with school systems being uniquely positioned to equip citizens with the psychological resources and intercultural competences that are needed to function effectively within multicultural societies.

Electrical issues in European cars can be intimidating. The Hack Mechanic Guide to European Automotive Electrical Systems shows you how to think about electricity in your car and then take on real-world electrical problems. The principles discussed can be applied to most conventional internal-combustion-engined vehicles, with a focus on European cars spanning the past six decades. Drawing on The Hack Mechanic's wisdom and experience, the 38 chapters cover key electrical topics such as battery, starter, alternator, ignition, circuits, and relays. Through a practical and informal approach featuring hundreds of full-color illustrations, author Rob Siegel takes the fear-factor out of projects like making wire repairs, measuring voltage drops, or figuring out if you have a bad fuel pump relay. Essential tools such as multimeters (DVOM), oscilloscopes, and scan tools are discussed, with special attention given to the automotive multimeter needed to troubleshoot many modern sensors. You'll get step-by-step troubleshooting procedures ranging from safely jump starting a battery to diagnosing parasitic current drain and vehicle energy diagnosis. And you'll find detailed testing procedures for most problematic electrical components on your European car such as oxygen sensors, crankshaft and camshaft sensors, wheel speed sensors, fuel pumps, solenoids, and actuators. Reading wiring diagrams and decoding the German DIN standard are also covered. Whether you are a DIY mechanic or a professional technician, The Hack Mechanic Guide to European Automotive Electrical Systems will increase your confidence in tackling automotive electrical problem-solving. This book applies to gasoline and diesel powered internal combustion engine vehicles. Not intended for hybrid or electric vehicles.
