Annually updated and revised by Hon. Donald G. Alexander of the Maine Supreme Judicial Court, Maine Jury Instruction Manual includes a wide array of civil and criminal jury instructions accompanied by commentary and discussion of practice points for closing arguments. New and revised instructions and commentary offer expert guidance on convening the jury panel, jury selection and voir dire, and return of the verdict, as well as practical guidance on how to present information to a jury in layman's terms to ensure effective communication with jury panels. Maine Jury Instruction Manual also provides extensive cross-references and online hyperlinks to the pattern criminal jury instructions for the District Courts of the First Circuit, with a cross-reference table and cross-references in related individual jury instructions. The subject matter index, table of cases, and table of statutes are also annually updated to reflect expanded and revised jury instruction coverage. The sample jury instructions will help legal professionals to avoid costly errors and to prepare for trial more quickly. The instructions lend themselves to ready customization to the facts of the case and expedite preparation for court. The vast array of forms in Maine Jury Instructions will save hours of expensive and frustrating research and replication.

The book presents practical aspects related to the measurement of rotational power loss in soft magnetic materials. The book furthermore focuses on practical aspects of performing such measurements, the associated difficulties as well as solutions to the most common problems. Numerous practical aspects, hands-on experience, and most commonly encountered pitfalls are heavily discussed in the book. The text begins with introduction to magnetism, then follows with definitions of measurement methods of rotational power loss from physical viewpoint. Two chapters describe and detail the various sensors which can be employed for such measurements as well as all the aspects of designing, making, and using a magnetising apparatus. A synthesis of the likely optimal design of a magnetising apparatus is also given, preceded with the full reasoning based on all the research carried out to date. Characterisation of Soft Magnetic Materials Under Rotational Magnetisation serves as an excellent starting point for any student having to perform magnetic measurements under rotational magnetisation, but also under 1D, 2D or 3D excitation. Because the methods, sensors, and apparatus are extensively discussed it will also be a great reference for more senior researchers and experts in the field. There is a whole chapter devoted to analysis of measurement uncertainty. This subject is rarely published for magnetic measurements, which makes it more difficult for all researchers to understand the concepts and methodology used in uncertainty estimation. This chapter not only introduces the whole subject, but also provides

multiple step-by-step examples which can be easily followed, from very simple cases to much more complex ones. All equations are presented with full SI units which greatly helps in practical application of the presented methodology. Each chapter is written in such a way that it can be studied on its own, so that the reader can focus only on the specific aspects, as required.

The European Union has highlighted the issue of environmentally sound use of products in the context of Integrated Product Policy, IPP. Accordingly, consumers should have easy access to understandable, relevant and credible environmental information. Information about product characteristics is available in different forms and sources, but in many cases, relevant environmental information is not available on the product itself. The study described in this report was initiated in order to produce information on the state of user instructions regarding environmental information. User manuals of passenger cars and refrigerators were focused on, examining the advice which could diminish the harmful environmental effects of the use of these products. Other studied products included such durable products as textiles and furniture as well as such consumables as cleaning chemicals and recyclable paper products. The study raised many ideas about actions that could promote the status and 'eco-development' of instructions for use.
