Alternative Fuel Vehicles gives full coverage of all associated qualifications and awards in the emerging field of alternative fuels. It is an essential introduction to the ever-growing demand for vehicles that operate using non-conventional fuels. This first book on AFVs endorsed by the IMI begins with an overview of the subject, ideal for

beginners, before outlining what is meant by alternative fuels, why they are necessary, and why climate change and associated legislation are key drivers. Details of how alternative fuels are made, the supply infrastructure, and how these vehicles work are all included. A chapter on fuel cells introduces learners to the use of hydrogen, and one on engines and engine management includes coverage of combustion as an aid to understanding why changing the type of engine fuel is complex. Some basic engine technology is included to help readers new to the subject. Real-life case studies and examples are used to illustrate different technologies in current use, and to speculate on new developments. This

book is an ideal companion to any unit of study on alternative fuel, but will also be of interest to working technicians and keen amateurs.

ACEEE's Green Book

NSTA Press

Driverless cars are on the horizon, but before the world falls asleep in the driver's seat, let's take a look back down the road from whence we have come. Ford Model-T Coast-to-Coast, documents the cross-country adventure of two brave drivers as they pilot a century-old Model-T on a 3,000-mile journey from the Atlantic Ocean to the Pacific Coast. The book is as much a contemplation of early-20th century American life as it is a fond farewell to the automotive age. Can the car still be the vehicle of freedom and discovery, when we're no longer in command? Or will we finally be able to fully appreciate the scenery rushing past? Accompanied by Michael Alan Ross' evocative photography, author Tom Cotter stops in

small towns, meets local people and hears their stories about cars, travel, and life. Cotter and Ross also explore back roads adjacent to his main route, the Lincoln Highway—the first transcontinental cross-country runs, such as those by speed-record setter Cannonball Baker, and literary adventurers such as Jack Kerourac, John Steinbeck and Bill Bryson are considered in light of the driverless future. Cotter also drives some of the same roads that a young Edsel Ford traveled in his father's Model T upon high school graduation in 1917. In addition to the central road trip, Cotter also visits interesting automotive and transport museums as well as "keepers of the flame" such as Model-T clubs, mechanics,

junkyards and collectors across the country. He also records the numerous trials and tribulations in keeping a 100-year-old car operating on a 3,000-mile journey, something the driverless car of the future is unlikely to encounter. Join Cotter on his "slow drive across a fast country." You'll be glad you did.

Ford Model T Coast to Coast American Council for an Energy-Efficient Economy Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. U.S. automakers are suddenly awash in profits, and South Koreans and Europeans have gained market shares, while Honda, Nissan, and Toyota have curtailed production following the 2011 tsunami in Japan. Shortages of Japanese new cars and supplier disruptions will likely push used car prices through the roof well into 2012, so what should a savvy
