Modern cars are more computerized than ever. Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. But vehicle technologies haven't kept pace with today's more hostile security environment, leaving millions vulnerable to attack. The Car Hacker's Handbook will give you a deeper understanding of the computer systems and embedded software in modern vehicles. It begins by examining vulnerabilities and providing detailed explanations of communications over the CAN bus and between devices and systems. Then, once you have an understanding of a vehicle's communication network, you'll learn how to intercept data and perform specific hacks to track vehicles, unlock doors, glitch engines, flood communication, and more. With a focus on low-cost, open source hacking tools such as Metasploit, Wireshark, Kayak, can-utils, and ChipWhisperer, The Car Hacker's Handbook will show you how to: –Build an accurate threat model for your vehicle –Reverse engineer the CAN bus to fake engine signals –Exploit vulnerabilities in diagnostic and data-logging systems –Hack the ECU and other firmware and embedded systems –Feed exploits through infotainment and vehicle-to-vehicle communication systems –Override factory settings with performance-tuning techniques –Build physical and virtual test benches to try out exploits safely If you're curious about automotive security and have the urge to hack a two-ton computer, make The Car Hacker's Handbook your first stop.

Stephenson's Rocket is one of the most famous steam locomotives of all time. Designed by Robert Stephenson, with input from his father, George, Rocket set the fundamental design template for almost all the locomotives that followed it. The original locomotive is owned by the National Railway Museum, and is currently on display at the Science Museum in London. Two working replicas of the locomotive have been built. The most advanced steam engine of its time, Rocket was built in 1829 for the Rainhill Trials held by the Liverpool & Manchester Railway (LMR) in order to evaluate locomotive designs and choose the best one for use on this new railway. Five locomotives took part in the trials and Rocket was chosen as the winning design. Published in association with the Science Museum, this manual, illustrated with a wealth of photographs and technical drawings, provides a fascinating insight into the design, construction and operation of Rocket.
