Industrial assets (such as railway lines, roads, pipelines) are usually huge, span long distances, and can be divided into clusters or segments that provide different levels of functionality subject to different loads, degradations and environmental conditions, and their efficient management is necessary. The aim of the book is to give comprehensive understanding about the use of autonomous vehicles (context of robotics) for the utilization of inspection and maintenance activities in industrial asset management in different accessibility and hazard levels. The usability of deploying inspection vehicles in an autonomous manner is explained with the emphasis on integrating the total process. Key Features Aims for solutions for maintenance and inspection problems provided by robotics, drones, unmanned air vehicles and unmanned ground vehicles Discusses integration of autonomous vehicles for inspection and maintenance of industrial assets Covers the industrial approach to inspection needs and presents what is needed from the infrastructure end Presents the requirements for robot designers to design an autonomous inspection and maintenance system Includes practical case studies from industries

With well over 25 years of experience, Sven Beiker is widely regarded as the mobility expert in Silicon Valley specializing in future trends for the automotive and mobility industries including autonomous driving, connectivity, electrification, and shared mobility. In *The Mobility Diaries: Connecting the Milestones of Innovation Leading to ACES*, he opens up his personal diary regarding his take on 50 years of mobility innovation and history interwoven with his experiences from 1978 to 2018. From the Foreword by Reilly P. Brennan:

" Understanding how transportation itself evolved requires a unique prism. The core components of vehicles today have stories and engineering journeys worth their own telling, and that is what is so exciting about the way we can learn about them in this text. Dr. Beiker ' s curriculum vitae, from BMW to Stanford University to McKinsey, are a compendium of experiences that created this unique historical and biographical book. "

" Sven and I are kindred spirits in the mobility world. His view on the evolution of mobility and technology illustrates why Detroit and Silicon Valley need one another. " Carla Bailo, Former President and CEO, Center for Automotive Research

Deepwater archaeology uncovers secrets from the ancient maritime past . . . Thousands of shipwrecks and archaeological sites lie undiscovered in deep water, potentially holding important clues to our maritime past. Scientists have explored only a small percentage of the oceans' depths, as 98 percent of the seabed lies well beyond the reach of conventional diving. Ships from the Depths surveys the dramatic advances in technology over the last few years that have made it possible for scientists to locate, study, and catalogue archaeological sites in waters previously inaccessible to humans. Researcher and explorer Fredrik S ø reide presents the development of deepwater archaeology since 1971, when Willard Bascom designed his Alcoa Seaprobe to locate and raise deepwater wrecks in the Mediterranean. Accompanied by descriptions and color photographs of deepwater projects and equipment,

this book considers not only techniques that have been developed for location and observation of sites but also removal and excavation methods distinctive to these unique locations, far beyond the reach of scuba gear. Sørensen provides an introduction to and survey of the history, development, and potential of this exciting branch of nautical archaeology. Scholars and field archaeologists will appreciate this handy compendium of the current state of the discipline and technology, and general readers will relish this comprehensive look at the challenges and opportunities associated with locating and studying historical and ancient shipwrecks in some of the world's deepest waters.
