Multinational economic actors, particularly corporations, play a defining role in the response to the climate change or warming debate and the emerging scientific consensus. This book describes, explains, and predicts how multinational firms will rise to the multiple challenges posed by global climate issues and the organizational and behavioral various responses of the international corporate community. It focuses on three core research and learning objectives. Firstly, it develops the core idea that multinational enterprises cannot implement meaningful sustainability initiatives without an appropriate governance system and corporate culture. Building on this notion, it addresses the question of environmental sustainability across select industry sectors, such as oil and banking. Finally, drawing on a diverse range of contributing experts, it presents select best practices such as the opportunities arising from smart technologies implementation to achieve symbiotic industrial relationships, directed particularly towards the ecological environment of these firms' transborder operations and global reach.

This book is dedicated to user experience design for automated driving to address humane aspects of automated driving, e.g., workload, safety, trust, ethics, and acceptance. Automated driving has experienced a major development boost in recent years. However, most of the research and implementation has been technology-driven, rather than human-centered. The levels of automated driving have been poorly defined and inconsistently used. A variety of application scenarios and restrictions has been ambiguous. Also, it deals with human factors, design practices and methods, as well as applications, such as multimodal infotainment, virtual reality, augmented reality, and interactions in and outside users. This book aims at 1) providing engineers, designers, and practitioners with a broad overview of the state-of-the-art user experience research in automated driving to speed-up the implementation of automated vehicles and 2) helping researchers and students benefit from various perspectives and approaches to generate new research ideas and conduct more integrated research.

This innovative book includes cases, problems, note materials and questions, as well as excerpts from law review articles and other secondary sources that explain the fit among the contemporary sources of Commercial Contracting Law. While the authors emphasize Uniform Commercial Code Articles 1 (as revised) and 2 (as enacted), but there are liberal references to Article 2A, UCITA, UETA, E-Sign, and the CISG to provide a sophisticated yet accessible presentation of the legal rules and principles that govern contemporary sales, leasing, and computer information transactions. Contemporary commercial contracting presents considerable pedagogical challenges. The authors provide a text that clearly explains the basic commercial context for the rule in question, and then provide materials that enable students to delve into more complex issues. Commercial Contracting: Sales, Leases, and Computer Information includes the cases that have continued to define commercial law for years as well as the most recent decisions that have changed the way we think about commercial contracting. The cases are complemented by extensive problems, permitting the instructor to emphasize either the case or problem approach. The authors have also integrated text and excerpts from treatises and law review articles that both put the issues in transactional context and test the limits of commercial codification.
