Inhaltsangabe:Abstract: In times of severe competition, it is of crucial importance to create a competitive advantage to differentiate from the competitors and to sustain the business of the company. This thesis intends to show that a customer-focused quality management is one way to create a sustainable competitive advantage. Quality controls along the whole value chain -before, during and after production- leads to failure free products, which save costs on the one hand and have thus a positive influence on the company s revenue. On the other hand failure free products that meet the customers expectations lead to satisfied customers who build up a brand loyalty and conduct retention sales, which have a positive influence on the company s sales, market share as well as the overall image. Furthermore, this thesis points out that it is important to listen to the voice of the customers and get an insight in

the customer's needs and wants. To fulfil or even exceed their expectations leads to customer satisfaction, which is a key to success in today's business world. In addition, the customer demands in regard of quality are growing continuously and new technologies are appearing on the markets on a regular basis. Therefore the producers are forced to keep to the latest technology developments and to get hold on the changing customer needs. But even without this external pressure, quality improvement is justified from a cost point of view. The applicability of a customer-oriented quality management is shown in the practical part of this thesis, when the quality of the Saab models is analyzed from the customer's perspective. Due to the arguments, outlined in this thesis, it can be summarized that a quality management with a focus on the needs of the customers in should become a core strategy of any company producing and selling products in order to create customer satisfaction and sustain the business. This thesis deals with the field of quality management in the context of customer satisfaction. To show the practical applicability of quality management, this thesis is looking at how quality management is conducted in the automotive industry, as we compare the Initial Quality Study (IQS) from the market research institute J. D. Power with a survey that was internally conducted at the Saab Automobile AB. Today's business environment creates a growing need for quality management. Tougher competition leads to the demand for cost savings and higher [...]

HM Saab 95 and 96 V4 1966-1976 All V4 Mod Haynes Publishing

Understanding project endings is a significant part of project management, yet there is relatively little work published in this important area. This book addresses the gap, focusing on the successful management of project endings, showing how to plan for the ending of a project, how to create ending competencies, and in particular, how to successfully manage

relations with different stakeholders of a project as it is coming to an end. Havila and Salmi use a real-life case in the airline industry to show how the successful ending project was achieved and in doing so portray ideas and experiences not typically considered in the field. Through the case discussion, the complexity of the process is unveiled and the achievement of success for all parties is explained. The book portrays three key success factors: ending competencies, to be developed both at the organizational and individual levels; efficient management of the business network around the ending project; and involvement at the strategic managerial level. It concludes that project endings are often complex and have far-reaching effects, and therefore, call for close managerial attention.

Saab 9. 3 755046-0002 GT1749MV Turbocharger Rebuild and Repair Guide: diplom.de

This book originated from the idea that performance is what really matters in business and thus in business history. Yet, surprisingly, the analysis of performances has been neglected by economic and business historians. This book is a first attempt to fill this gap and in doing so provides a totally new approach to European business history. Rather than bringing together national studies, it is based on a single database, measuring performance in eight European countries according to identical criteria. The study spans the entire twentieth century, with particular attention to five benchmark moments: the height of the first globalisation on the eve of the First World War; the late 1920s boom preceding the Great Depression; the European reconstruction of the mid-1950s; the end of 'Golden Age' in the early 1970s; and the height of the second globalisation at the turn of the twenty-first century. The analysis is based on a sample of 1,225 companies, belonging to the three major European economies, Britain, France and Germany; two large south European latecomers, Italy and Spain; two smaller north western countries, Belgium and Sweden, and one small Nordic country, Finland. Performance has been measured using two ratios of profitability: return

on equity (ROE) and holding return (HR), thus providing a complementary measure of profitability, the former as seen from the firm's perspective, the latter from the investor's perspective. The book's findings, at times surprising, at once confirm and infirm widely held assumptions regarding business performance - regarding strategy and structure, ownership and control, old and new industries, emerging and advanced economies.
