In 2010 the UK government proposed huge cuts and market-driven reforms for Universities. The proposals provoked widespread opposition in the form of street protests, occupations, and online campaigns. As the dust settles, Andrew McGettigan surveys the emerging brave new world of Higher Education. Displaying a stunning grasp of the policy details, he looks at the long term impact of the changes, which have been obscured by the focus on tuition fee increases. What will be the role of universities within society? How will they be funded? What kind of experiences will they offer students? Written in a clear and engaging style, The Great University Gamble outlines the architecture of the new policy regime, which many find difficult to grasp. It is an urgent warning that our Universities are being transformed from institutions of real learning to profit-driven degree factories.

This collection of motorcycle tales features the best of the vast collection of motorcycle writing created since old Gottlieb Daimler first bolted a crude internal-combustion engine to his wooden two-wheeled Einspur in 1876. In addition to essays from Thompson and Pirsig, The Devil Can Ride features works by Peter Egan, T.E. Lawrence, James Stevenson, Jamie Elvidge, John Hall, and Kevin Cameron.

This book attempts to provide a simplified framework for the vast and complex map of technical material that exists on compression-ignition engines, and at the same time include sufficient details to convey the complexity of engine simulation. The emphasis here is on the thermodynamics, combustion physics and chemistry, heat transfer, and friction processes relevant to compression-ignition engines with simplifying assumptions.

From the beginning Integrated Photonics introduces numerical

techniques for studying non-analytic structures. Most chapters

have numerical problems designed for solution using a

computational program such as Matlab or Mathematica. An

entire chapter is devoted to one of the numeric simulation

techniques being used in optoelectronic design (the Beam

Propagation Method), and provides opportunity for students to

explore some novel optical structures without too much effort.

Small pieces of code are supplied where appropriate to get the

reader started on the numeric work. Integrated Photonics is

designed for the senior/first year graduate student, and requires

a basic familiarity with electromagnetic waves, and the ability to

solve differential equations with boundary conditions.

[Workshop Technology \(Manufacturing Process\)](#) A&C Black

"What greater investment can a nation make than in the health of its

children? Yet tragically, until the twentieth century nearly half of all

children in the United States died before reaching adolescence." "The

history of children's health in America - its evolution from the rudimentary

ministrations of colonial times to the comprehensive care afforded children

today - is a fascinating story, not just of medical advances but of society's

changing perspectives and emphases, and of the roles religion, philosophy,

and science have played in children's health care." ""To understand the

history of children's health in America, we must move beyond political

campaigns, industrialization, and even the startling science of the physician

and instead emphasize the home and the hearth as much more dramatic

determinants of the health of American children," asserts Charles R. King,

M.D., in this inaugural volume in Twayne's History of American

Childhood Series. Arranged chronologically, the book provides an

absorbing survey of children's health from colonial times to the present -

from the influence of Rousseau to the focus on motherhood, from the rise

of "pediatrists" to the growth of the "child saving" movement, and from the

1921 legislation heralding the government's first major involvement in

children's health to the tremendous achievements of modern pediatric

science and the growing recognition that children's health encompasses

sociocultural as well as medical issues. Meticulously researched and

illuminated with numerous quotations from child-rearing manuals, diaries,

and letters, Children's Health in America will be of value to historians,

health care professionals, students - and all those interested in the well-

being of American children, past and present. Included in the volume are

illustrations, a chronology, and suggestions for further reading."--BOOK

This is a true story about a special relationship that developed between a

wild desert bird and the owner and friends of a special house in the

Western Mojave in California. If you have ever looked into the eyes of a

wild animal, especially in its natural habitat, you know how special that

moment can be. Anyone with a family pet knows the special bond between

animal and man and it can be a truly amazing experience. In fact, most pet

"owners" consider their animals to be an integral part of the family and

include them in weddings, rely on them for protection and grieve upon

their demise. Having an untamed animal not only approach you but

maintain a constant presence throughout its life was transformative for me

and became a defining part of my life. It is a story that is best shared and

will hopefully enrich yours as well.
