This book attempts to provide a simplified framework for the vast and complex map of technical material that exists on compression-ignition engines, and at the same time include sufficient details to convey the complexity of engine simulation. The emphasis here is on the thermodynamics, combustion physics and chemistry, heat transfer, and friction processes relevant to compression-ignition engines with simplifying assumptions.

This project-oriented facilities design and material handling reference explores the techniques and procedures for developing an efficient facility layout, and introduces some of the state-of-the-art tools involved, such as computer simulation. A "how-to," systematic, and methodical approach leads readers through the collection, analysis and development of information to produce a quality functional plant layout. Lean manufacturing; work cells and group technology; time standards; the concepts behind calculating machine and personnel requirements, balancing assembly lines, and leveling workloads in manufacturing cells; automatic identification and data collection; and ergonomics. For facilities planners, plant layout, and industrial engineer professionals who are involved in facilities planning and design.

From the beginning Integrated Photonics introduces numerical techniques for studying non-analytic structures. Most chapters have numerical problems designed for solution using a computational program such as Matlab or Mathematica. An entire chapter is devoted to one of the numeric simulation techniques being used in optoelectronic design (the Beam Propagation Method), and provides opportunity for students to explore some novel optical structures without too much effort. Small pieces of code are supplied where appropriate to get the reader started on the numeric work. Integrated Photonics is designed for the senior/first year graduate student, and requires a basic familiarity with electromagnetic waves, and the ability to solve differential equations with boundary conditions.

In Phenomena of Power, one of the leading figures of postwar German sociology reflects on the nature, and many forms of, power. For Heinrich Popitz, power is rooted in the human condition and is therefore part of all social relations. Drawing on philosophical anthropology, he identifies the elementary forms of power to provide detailed insight into how individuals gain and perpetuate control over others. Instead of striving for a power-free society, Popitz argues, humanity should try to impose limits on power where possible and establish counterpower where necessary. Phenomena of Power delves into the sociohistorical manifestations of power and breaks through to its general structures. Popitz distinguishes the forms of the enforcement of power as well as of its stabilization and institutionalization, clearly articulating how the mechanisms of power work and how to track them in the social world. Philosophically trained, historically informed, and endowed with keen observation, Popitz uses examples ranging from the way passengers on a ship organize deck chairs to how prisoners of war share property to illustrate his theory. Long influential in German sociology, Phenomena of Power offers a challenging reworking of one of the essential concepts of the social sciences.

This textbook includes exposure to plant & shop layout, industrial safety, engineering materials and their heat treatment, bench work and fitting, smithy and forging, sheet metal work, wood and wood working, foundry, welding, mechanical working and machine shop practices. A greater stress has been laid on pictorial representation of various hand tools, operators and machine tools rather than giving exhaustive write up on various topics. The matter has been presented in a structured manner and in an easy to understand language, which can be mastered easily by students of various disciplines. Attention has also been paid to the fact that the text as well as the diagrams can be easily reproduced by the students in theory examinations. The book will be useful for the students of engineering, supervisors, tool room personnel and operators working in manufacturing and other industries.

This is a true story about a special relationship that developed between a wild desert bird and the owner and friends of a special house in the Western Mojave in California. If you have ever looked into the eyes of a wild animal, especially in its natural habitat, you know how special that moment can be. Anyone with a family pet knows the special bond between animal and man and it can be a truly amazing experience. In fact, most pet "owners" consider their animals to be an integral part of the family and include them in weddings, rely on them for protection and grieve upon their demise. Having an untamed animal not only approach you but maintain a constant presence throughout its life was transformative for me and became a defining part of my life. It is a story that is best shared and will hopefully enrich yours as well.

"What greater investment can a nation make than in the health of its children? Yet tragically, until the

twentieth century nearly half of all children in the United States died before reaching adolescence." "The history of children's health in America - its evolution from the rudimentary ministrations of colonial times to the comprehensive care afforded children today - is a fascinating story, not just of medical advances but of society's changing perspectives and emphases, and of the roles religion, philosophy, and science have played in children's health care." "To understand the history of children's health in America, we must move beyond political campaigns, industrialization, and even the startling science of the physician and instead emphasize the home and the hearth as much more dramatic determinants of the health of American children," asserts Charles R. King, M.D., in this inaugural volume in Twayne's History of American Childhood Series. Arranged chronologically, the book provides an absorbing survey of children's health from colonial times to the present - from the influence of Rousseau to the focus on motherhood, from the rise of "pediatrists" to the growth of the "child saving" movement, and from the 1921 legislation heralding the government's first major involvement in children's health to the tremendous achievements of modern pediatric science and the growing recognition that children's health encompasses sociocultural as well as medical issues. Meticulously researched and illuminated with numerous quotations from child-rearing manuals, diaries, and letters, Children's Health in America will be of value to historians, health care professionals, students - and all those interested in the well-being of American children, past and present. Included in the volume are illustrations, a chronology, and suggestions for further reading."--BOOK JACKET. Title Summary field provided by Blackwell North America, Inc. All Rights Reserved

In 1902 when Lt. Ridley McLean first wrote this "sailor's bible," he described it as a manual for every person in the naval service. One hundred years later, it continues to serve as a primer for newly enlisted sailors and as a basic reference for all naval personnel--from seaman to admiral. New technology is artfully blended with ancient heritage, facts and figures are augmented by helpful advice, and the mysterious language of the sea is preserved and deciphered in a volume that has served the United States Navy for an entire century. Updated throughout, the book provides the latest Navy ratings, uniforms, ships, aircraft, and weapons as well as current Navy policies on hazing, fraternization, education, and physical fitness, and a completely new chapter explaining the Navy's mission in terms of its rich heritage.

In 2010 the UK government proposed huge cuts and market-driven reforms for Universities. The proposals provoked widespread opposition in the form of street protests, occupations, and online campaigns. As the dust settles, Andrew McGettigan surveys the emerging brave new world of Higher Education. Displaying a stunning grasp of the policy details, he looks at the long term impact of the changes, which have been obscured by the focus on tuition fee increases. What will be the role of universities within society? How will they be funded? What kind of experiences will they offer students? Written in a clear and engaging style, The Great University Gamble outlines the architecture of the new policy regime, which many find difficult to grasp. It is an urgent warning that our Universities are being transformed from institutions of real learning to profit-driven degree factories.

Authors such as Hunter Thompson, Robert Pirsig, and Mark Singer have written about the motorcycle, that icon for outlaws, rebels, thieves, and beat poets. This collection of motorcycle tales features the best of the vast collection of motorcycle writing created since old Gottlieb Daimler first bolted a crude internal-combustion engine to his wooden two-wheeled Einspur in 1876. In addition to essays from Thompson and Pirsig, The Devil Can Ride features works by Peter Egan, T.E. Lawrence, James Stevenson, Jamie Elvidge, John Hall, and Kevin Cameron.

Best in Show is a collection of photographs of well-groomed and award-winning dogs by New York City – based photographer Dolly Faibyshev. The images from the Westminster Kennel Club Dog Show and beyond focus on the unique—and often humorous—relationship between each dog and their handler. Dolly Faibyshev focuses on kitsch, irony, and the larger than life human and canine characters that make up Best in Show. The result is a colorful, vibrant, campy, and satirical take on this specific slice of Americana.

- The colorful, closely cropped juxtapositions of each coiffed canine contestant and their dedicated human are both humorous and charming.
- Sure to delight fans of all breeds of dogs
- A universal and ideal book for all canine lovers with a sense of humor Best in Show captures a specific subculture of dog devotees primarily from the infamous Westminster Kennel Club Dog Show at Madison Square Garden in New York.
- A perfect book for anyone who is completely and totally obsessed with dogs and the Westminster Kennel Club Dog Show
- Photographers and contemporary art lovers will also love this celebration of Dolly Faibyshev's work
- Great for fans of *The Dogist: Photographic Encounters with 1,000 Dogs* by Elias Weiss Friedman, *Dogs* by Lewis Blackwell and Tim Flach, and *Underwater Dogs* by Seth Casteel
