Relating the blues to American social and literary history and to Afro-American expressive culture, Houston A. Baker, Jr., offers the basis for a broader study of American culture at its "vernacular" level. He shows how the "blues voice" and its economic undertones are both central to the American narrative and characteristic of the Afro-American way of telling it.

Desertification offers a comprehensive overview of the subject and clearly emphasizes the link between local and global desertification processes and how past and current policy has affected arid environments and their populations. This text adequately applies the research undertaken during the last 15 years on the topic.

Desertification has become increasingly politicized and there is a need to present and explain the facts from a global perspective. This book tackles the issues surrounding desertification in a number of ways from differing scales (local to global), processes (physical to human), the relationship of desertification to current global development and management responses at different scales.

Desertification has been mainstreamed and integrated into other areas of concern and has consequently been ignored as a cross cutting issue. The book redresses this balance. Making use of much original data and information that has been undertaken by many scientists and practitioners during the last decade in different parts of the world, *Desertification, Land Degradation and Sustainability* is organised according to the principles of adaptive management and hierarchy theory and clearly explains desertification within a

framework of evolving and interacting physical and socio-economic systems. In addition to research data the book also draws from the National Action Plans of different countries, the IPCC Fourth Assessment on Climate Change and the Millennium assessments. Clearly structured throughout, the content of the book is organised at different scales; local, regional and global. It also specifically explains processes linking top-down and bottom-up interactions and has a strong human component. The historical, cultural and physical context is also stressed. Clearly organised into the following distinct sections: a) Concepts and processes b) Data c) Impacts d) Responses e) Case studies. This text is essential for anyone studying desertification as part of an earth and environmental science degree.

While the research and management of wildlife has traditionally emphasised studies at smaller scales, it is now acknowledged that larger, landscape-level patterns strongly influence demographic processes in wild animal species. This book is the first to provide the conceptual basis for learning how larger scale patterns and processes can influence the biology and management of wildlife species. It is divided into three sections: Underlying Concepts, Landscape Metrics and Applications and Large Scale Management.

Constitutional review has become an essential feature of modern liberal democratic constitutionalism. In particular, constitutional review in the context of rights litigation has proved to be most challenging for the courts. By offering in-depth analyses on changes affecting constitutional design and constitutional adjudication, while also engaging with general theories of comparative constitutionalism, this book seeks to provide a heightened understanding

of the constitutional and political responses to the issue of adaptability and endurance of rights-based constitutional review. These original contributions, written by an array of distinguished experts and illustrated by the most up-to-date case law, cover Australia, Belgium, Finland, France, Hungary, Ireland, Italy, Spain, the United Kingdom and the United States, and include constitutional systems that are not commonly studied in comparative constitutional studies.

Providing structured analyses, the editors combine studies of common law and civil law jurisdictions, centralized and decentralized systems of constitutional review, and large and small jurisdictions. This multi-jurisdictional study will appeal to members of the judiciary, policymakers and practitioners looking for valuable insights into the case law of a range of constitutional and supreme courts in this rapidly expanding field of constitutional adjudication. It also serves as an excellent resource for academics, scholars and advanced students in the fields of law, human rights and political science.

The Economic Valuation of Landscape Change Springer Science & Business Media

The impacts of climate change on human societies, and the roles those societies themselves play in altering their environments, appear in headlines more and more as concern over modern global climate change intensifies. Increasingly, archaeologists and

paleoenvironmental scientists are looking to evidence from the human past to shed light on the processes which link environmental and cultural change. Establishing clear contemporaneity and correlation, and then moving beyond correlation to causation, remains as much a theoretical task as a methodological one. This book addresses this challenge by exploring new approaches to human-environment dynamics and confronting the key task of constructing arguments that can link the two in concrete and detailed ways. The contributors include researchers working in a wide variety of regions and time periods, including Mesoamerica, Mongolia, East Africa, the Amazon Basin, and the Island Pacific, among others. Using methodological vignettes from their own research, the contributors explore diverse approaches to human-environment dynamics, illustrating the manifold nature of the subject and suggesting a wide variety of strategies for approaching it. This book will be of interest to researchers and scholars in Archaeology, Paleoenvironmental Science, Ecology, and Geology. *Climate Change and United States Forests* Edward Elgar Publishing

Development and status of landscape ecology - subject of this book During the last decades, landscape ecology has developed tremendously. It concerns both the theoretical basis and practical application. The roots of landscape ecology are geography and biology. The term "landscape ecology" was first coined by the German scientist Carl Troll in 1939. ünce, the development center of landscape ecology was in Central Europe. Recently, also other parts of the world became powernd centers of landscape ecology, es pecially Northern America. American approaches partly differ essentially from the European, because they are focused esp. on biogeography and population dynamics. In Europe, however, the geographical roots of land scape ecology playamajor role. Landscape is defined as a complex of abiotic, biotic and human components. Mainly due to linguistic barriers, the international discussion does not take notice of approaches and experiences from non-

anglophone countries in a sufficient manner. Therefore this book considers more the German and European views on landscape ecology than the books which were published before. It tries to bridge the gaps between theory and practice of landscape ecology, as well between the Ger manlEuropean and American approach es. The book gives a fundamental representation of landscape ecology, which proves to be a young, but an interesting and very important transdisci plinary science for the solution of environmental problems. Both the theo retical basis and practical application of landscape ecology are considered. *Human Ecodynamics in the North Atlantic* Cambridge University Press

Rivers are an excellent witness of the dynamics affecting Earth ' s surface due to their sedimentary products and morphological expression, which may be considered as fluvial archives. Until now, the focus has been on evaluating the general impact of individual external factors. However, the importance of the specific environmental characteristics of these factors has become increasingly recognized, as highlighted in recent case studies. For example, the effects of regional climate, differentiated topography and vegetation, and frozen ground appear to play an essential role in the evolution of the fluvial system. Integration of such environmental conditions in the processes that were active within the complex fluvial system will open new perspectives in our progressive understanding of the evolution of landscape form, ecology, sediment fluxes, and hydrology of the system within the framework of the external drivers such as tectonics, general climate, and human activity. This is an appealing challenge that we wish to address in the present Special Issue under the aegis of the Fluvial Archives Group (FLAG). *Desertification, Land Degradation and Sustainability* SCB Distributors

The increase in landscape degradation in the last

decades has resulted in a growing public concern for policies to conserve the countryside. This book presents theories of valuation and economic welfare which are applied to policies to conserve the landscape. Environmental, agricultural and ecological economists will be interested in this book as will geographers and those involved in planning and countryside management. *Status and Trends of the Nation's Biological Resources* DIANE Publishing

Featuring contributions from top scholars and emerging stars in the field, the *Handbook of Protest and Resistance in China* captures the complexity of protest and dissent in contemporary China, while simultaneously exploring a number of unifying themes. Examining how, when, and why individuals and groups have engaged in contentious acts, and how the targets of their complaints have responded, the volume sheds light on the stability of China ' s existing political system, and its likely future trajectory. *Demographic Change in Australia's Rural Landscapes* Lexington Books

What makes people fight for countries other than their own? Nir Arielli offers a wide-ranging history of foreign-war volunteers, from the French Revolution to Syria. Challenging notions of foreign fighters as a security problem, Arielli explores motivations, ideology, gender, international law, military significance, and the memory of war. *Emergencies in Public Law* Corwin Press

With recent changes in technology, media, and the communication landscape, the journey to ethics has become more complicated than ever before. This book aims to answer ethical questions, from applying ethics and sound judgment through your organization and communication channels to taking your ethics and values into every media interview. With the understanding of how personal and professional ethics align, business leaders, managers, and students will maneuver their way around this new landscape showcasing their values in ethical conduct. This book is divided into eight important areas based on where and why a breakdown in ethical behavior is likely to occur, and delivers advice from experts on the frontlines of business communications who know what it means to face the inherent changes and challenges in this field. With more than 80 questions and answers focused on guiding marketing, PR and business professionals, readers will uncover situations where ethics are challenged, and their values will be tested. This

straightforward Q&A guidebook is for professionals who realize ethics are a crucial part of decision-making in their communications and who want to maintain trust with the public and their positive brand reputations in business. Readers will receive answers to pressing ethical questions to help them apply best practice guidelines and good judgment in their own situations, based on the stories, theories, and practical instruction from the author's 30 years of experience as well as the thought leaders featured in this book.

Beyond the Betrayal DIANE Publishing

Sustaining Soil Productivity in Response to Global Climate Change: Science, Policy, and Ethics is a multi-disciplinary volume exploring the ethical, political and social issues surrounding the stewardship of our vital soil resources. Based on topics presented by an international group of experts at a conference convened through support of the Organization for Economic Co-operation and Development, chapters include scientific studies on carbon sequestration, ecosystem services, maintaining soil fertility, and the effects of greenhouse gas emissions, as well as ethical issues ranging from allocation of land use to policies needed for climate change adaptation and mitigation. Bringing together the latest research in soil science and climatology,

Sustaining Soil Productivity in Response to Global Climate Change is a valuable resource for soil and plant scientists, agronomists and environmental scientists, as well as agricultural and natural resources engineers and economists, environmental policy makers and conservationists. Key Features: Written by an international group of authors representing a cross-section of scientists, thought leaders, and policy-makers. Includes chapters on the potential effects of climate change on forest soil carbon, microbial function, and the role of soils and biogeochemistry in the climate and earth system. Explores historical development of land use ethics and stewardship.

The Intergovernmental Panel on Climate Change (IPCC) is the leading international body for assessing the science related to climate change. It provides policymakers with regular assessments of the scientific basis of human-induced climate change, its impacts and

future risks, and options for adaptation and mitigation.

This IPCC Special Report on the Ocean and Cryosphere in a Changing Climate is the most comprehensive and up-to-date assessment of the observed and projected changes to the ocean and cryosphere and their associated impacts and risks, with a focus on resilience, risk management response options, and adaptation measures, considering both their potential and limitations. It brings together knowledge on physical and biogeochemical changes, the interplay with ecosystem changes, and the implications for human communities. It serves policymakers, decision makers, stakeholders, and all interested parties with unbiased, up-to-date, policy-relevant information. This title is also available as Open Access on Cambridge Core.

Lead for efficacy in these disruptive times! Cultivating a school culture focused on the achievement of students while anticipating change is imperative, but it's tough to keep up with varying leadership demands when it seems like society and technology are constantly changing as well! Moving beyond the skills and tools introduced in the first edition, this revamped second edition features: New organization emphasizing the interconnectivity of the Pillars of Digital Leadership Innovative strategies and leadership practices that enhance school culture and drive learning improvement Updated vignettes from digital leaders who have successfully implemented the included strategies New online resources, informative graphics, and end of chapter guiding questions Effects of Climate Change on Natural Resources and Communities: A Compendium of Briefing Papers Routledge This book explores links and synergies between international trade and two of the most urgent challenges of the 21st century: achieving sustainable energy (i.e., energy that is affordable, secure, and clean) and mitigating climate change. It takes the unique approach of not only examining how international trade can help achieve energy and climate goals, but also the impact of emerging tools and technologies such as smart grids and demand response, and the potential role and impact of citizens and prosumers. The book analyzes energy- and trade-related regulations in a range of jurisdictions to assess how conducive the regulation is towards achieving sustainable energy, and identifies gaps and overlaps in the existing legal framework.

Beyond the Betrayal is a lyrically written memoir by Yoshito Kuromiya (1923 – 2018), a Nisei member of the Fair Play Committee (FPC), which was organized at the Heart Mountain concentration camp. The first book-length account by a Nisei World War II draft resister, this work presents an insider's perspective on the FPC and the infamous trial condemning its members' efforts. It offers not only a beautifully written account of an important moment in US history but also a rare acknowledgment of dissension within the resistance movement, both between the young men who went to prison and their older leaders and also among the young men themselves. Kuromiya's narrative is enriched by contributions from Frank Chin, Eric L. Muller, and Lawson Fusao Inada. Of the 300 Japanese Americans who resisted the military draft on the grounds that the US government had deprived them of their fundamental rights as US citizens, Kuromiya alone has produced an autobiographical volume that explores the short- and long-term causes and consequences of this fateful wartime decision. In his exquisitely written and powerfully documented testament he speaks truth to power, making evident why he is eminently qualified to convey the plight of the Nisei draft resisters. He perceptively reframes the wartime and postwar experiences of the larger Japanese American community, commonly said to have suffered in the spirit of shikata ga nai—enduring that which cannot be changed—and emerged with dignity. **Beyond the Betrayal** makes abundantly clear that the unjustly imprisoned Nisei could and did exercise their patriotism even when they refused to serve in the military in the name of civil liberties and social justice. Kuromiya's account, initially privately circulated only to family and friends, is an invaluable and insightful addition to the Nikkei historical record. **The New Business of Acting** Cambridge University Press

This volume offers a scientific assessment of the effects of climatic variability and change on forest resources in the United States. Derived from a report that provides

technical input to the 2013 U.S. Global Change Research Program National Climate Assessment, the book serves as a framework for managing U.S. forest resources in the context of climate change. The authors focus on topics having the greatest potential to alter the structure and function of forest ecosystems, and therefore ecosystem services, by the end of the 21st century. Part I provides an environmental context for assessing the effects of climate change on forest resources, summarizing changes in environmental stressors, followed by state-of-science projections for future climatic conditions relevant to forest ecosystems. Part II offers a wide-ranging assessment of vulnerability of forest ecosystems and ecosystem services to climate change. The authors anticipate that altered disturbance regimes and stressors will have the biggest effects on forest ecosystems, causing long-term changes in forest conditions. Part III outlines responses to climate change, summarizing current status and trends in forest carbon, effects of carbon management, and carbon mitigation strategies. Adaptation strategies and a proposed framework for risk assessment, including case studies, provide a structured approach for projecting and responding to future changes in resource conditions and ecosystem services. Part IV describes how sustainable forest management, which guides activities on most public and private lands in the United States, can provide an overarching structure for mitigating and adapting to climate change.

Despite the high level of political engagement and the wide range of organizations involved in restoration projects from local to global levels, beyond some success stories, restoration is not happening at scale. To address this issue, three CGIAR Research Programs (CRPs) – Forests, Trees and Agroforestry (FTA); Policies, Institutions and Markets (PIM) and Water, Land and Ecosystems (WLE) – decided to bring together their expertise in a joint stocktaking of CGIAR work on restoration. This publication illustrates with concrete examples the powerful contribution of forest and landscape restoration to the achievement of most, if not all the 17 sustainable development goals. It can be used to support the design of future restoration activities, programs and projects. We hope that this document will help upscale restoration efforts and deliver enhanced impact from our CGIAR research.
