This monograph examines and analyses the
phenomenon of non-binding instruments (also
known as 'soft law') in the law of armed conflict, or
international humanitarian law. It covers the benefits
and drawbacks for States and non-States actors as
well as their effectiveness and development in the
context of armed conflict.

The HPCR Manual on International Law
Applicable to Air and Missile Warfare provides
an up-to-date restatement of existing
international law applicable to the conduct of
air and missile warfare. The HPCR Manual
and its associated rule-by-rule Commentary
are the results of a six-year endeavor led by
the Program on Humanitarian Policy and
Conflict Research (HPCR) at Harvard
University, during which it convened an
international group of renowned legal experts
and practitioners to reflect on the current legal
framework regulating air and missile warfare
from various sources of international law.
Through the publication of the HPCR Manual
and its associated Commentary, HPCR hopes
that legal advisors and military officers will
benefit from an in-depth presentation - and
interpretation - of international law applicable
to military operations involving air and missile
warfare. As a result, it is expected that a
greater clarity of the law will enhance the
protection of civilians in armed conflict.

Issues of the war that have provoked public controversy and legal debate over the last two years—the Cambodian invasion of May-June 1970, the disclosure in November 1969 of the My Lai massacre, and the question of war crimes—are the focus of Volume 3. As in the previous volumes, the Civil War Panel of the American Society of International Law has endeavored to select the most significant legal writing on the subject and to provide, to the extent possible, a balanced presentation of opposing points of view. Parts I and II deal directly with the Cambodian, My Lai, and war crimes debates. Related questions are treated in the rest of the volume: constitutional debate on the war; the distribution of functions among coordinate branches of the government; the legal status of the insurgent regime in the struggle for control of South Vietnam; prospects for settlement without a clear-cut victory; and Vietnam's role in general world order. The articles reflect the views of some forty contributors: among them, Jean Lacouture, Henry Kissinger, John Norton Moore, Quincy Wright, William H. Rhenquist, and Richard A. Falk. Originally published in 1972. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Henry Ford's Model T forever changed the world. The car made "for the great multitude" (as Ford put it) first debuted in 1908 and proved so affordable and so popular that fifteen million were sold through 1927. The "Tin Lizzie" was the first automobile to be mass-produced on moving assembly lines, and built using interchangeable parts. It proved tough and reliable in everyday use,

and cheap enough to spawn the automobile revolution: the car cost \$850 in 1909 but amazingly by the 1920s, the price had dropped to a mere \$260 due to the perfection of production techniques and economy of scale. Designed by a team that included Childe Harold Willis, Joseph Galamb and Eugene Farkas, the Model T had a front-mounted four-cylinder engine that produced 20 hp and had a top speed of 45 mph. It was a rear-wheel drive vehicle with wooden wheels, and featured a two-speed transmission plus a reverse gear. Although models varied - and many revisions took place over two decades of production - the original version weighed about 1200 pounds. Created in the 1920s and featuring information about the original Model T and the "New Model T" of 1925, this maintenance manual is an invaluable resource. It was originally intended to educate the men tasked with assembling, repairing and maintaining the Model T, and offers a plethora of information about the car, its design and operation. The text includes chapters on how to take apart and put together the car, how to overhaul the engine and transmission, valve grinding and carbon removal, rod bearings, fitting pistons and rings, correcting noisy timing gears, installation of camshaft bearings, cleaning oil lines, oil leaks, transmission band installation, axle overhauls, refurbishing and replacing springs, radiator repair, starting motor overhaul, and more. It also includes troubleshooting and general servicing information. A must have for any Model T owner, this book is also a terrific reference for the docent, historian, or anyone who ever wondered, "how did that work?"

The Right to Life under International Law offers the first-ever comprehensive treatment under international law of the foundational human right to life. It describes the history, content, and status of the right, considers jurisdictional issues, and discusses the application of the right to a wide range of groups, such as women, children, persons with disabilities, members of minorities, LGBTI persons, refugees, and journalists. It defines the responsibility of not only governments but also the private sector, armed groups, and non-governmental organisations to respect the prohibition on arbitrary deprivation of life. It also explains the nature and substance of the duty to investigate potentially unlawful death as well as the mechanisms at global and regional level to promote respect for the right to life.
