The HPCR Manual on  
International Law

---

Applicable to Air and Missile Warfare provides an up-to-date restatement of existing international law applicable to the conduct of air and missile warfare. The HPCR Manual and its associated rule-by-rule Commentary are the results of a six-year endeavor led by the Program on Humanitarian Policy and Conflict Research (HPCR) at Harvard University, during which it convened an international group of renowned legal experts and practitioners to reflect on the current legal framework regulating air and missile warfare from various sources of international law. Through the publication of the HPCR Manual and its associated Commentary, HPCR hopes that legal advisors and military officers will benefit from an in-depth presentation - and interpretation - of international law applicable to military operations involving air and missile warfare. As a result, it is expected that a greater clarity of the law will enhance the protection of civilians in armed conflict.

Henry Ford's Model T forever changed the world. The car made "for the great multitude" (as Ford put it) first debuted in 1908 and proved so affordable and so popular that fifteen million were sold through 1927. The "Tin Lizzie" was the first automobile to be mass-produced on moving assembly lines, and built using interchangeable parts. It proved tough and reliable in everyday use, and cheap enough to spawn the automobile revolution: the car cost \$850 in 1909 but amazingly by the 1920s, the price had dropped to a mere \$260 due to the

perfection of production techniques and economy of scale. Designed by a team that included Childe Harold Willis, Joseph Galamb and Eugene Farkas, the Model T had a front-mounted four-cylinder engine that produced 20 hp and had a top speed of 45 mph. It was a rear-wheel drive vehicle with wooden wheels, and featured a two-speed transmission plus a reverse gear. Although models varied - and many revisions took place over two decades of production - the original version weighed about 1200 pounds. Created in the 1920s and featuring information about the original Model T and the "New Model T" of 1925, this maintenance manual is an invaluable resource. It was

originally intended to educate the men tasked with assembling, repairing and maintaining the Model T, and offers a plethora of information about the car, its design and operation. The text includes chapters on how to take apart and put together the car, how to overhaul the engine and transmission, valve grinding and carbon removal, rod bearings, fitting pistons and rings, correcting noisy timing gears, installation of camshaft bearings, cleaning oil lines, oil leaks, transmission band installation, axle overhauls, refurbishing and replacing springs, radiator repair, starting motor overhaul, and more. It also includes troubleshooting and general servicing information.

A must have for any Model T owner, this book is also a terrific reference for the docent, historian, or anyone who ever wondered, "how did that work?"

Monthly Catalog, United States Public Documents Princeton University Press Issues of the war that have provoked public controversy and legal debate over the last two years—the Cambodian invasion of May-June 1970,

the disclosure in November 1969 of the My Lai massacre, and the question of war crimes—are the focus of Volume 3. As in the previous volumes, the Civil War Panel of the American Society of International Law has endeavored to select the most significant legal writing on the subject and to provide, to the extent possible, a balanced presentation of opposing points of view. Parts I and II deal directly with the Cambodian, My Lai, and war crimes debates. Related questions are treated in the rest

of the volume: constitutional debate on the war; the distribution of functions among coordinate branches of the government; the legal status of the insurgent regime in the struggle for control of South Vietnam; prospects for settlement without a clear-cut victory; and Vietnam's role in general world order. The articles reflect the views of some forty contributors: among them, Jean Lacouture, Henry Kissinger, John Norton Moore, Quincy Wright, William H. Rhenquist, and Richard A. Falk. Originally
