Concepts of Biology is designed for the single-semester introduction to biology course for non-

science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

This remarkable work explores deep into human psyche and the society to reveal the secret of our startling susceptibility to deceptions, and the heroism required to pursue truth. To different people, same event could make fundamentally different impressions, causing different responses, and ultimately leading us to our different destinies. For example, while topsy-turvy childhood produces subconscious filters that distort the world, peaceful and loving childhood nurture confidence, therefore allowing the subconscious filters to report reality to our consciousness. In the society, the educational, business, economic, political, and international systems cast lies upon us, with the help of nature's antagonistic laws. Only with gallant efforts and through torturous courses, we may, through understanding and taking actions, reach the promise land of honesty, freedom, tranquility, and happiness.
