Development of Aston Martin's V8 engine began in 1963 as a replacement for the six cylinder engines which had powered every model of Aston Martin since the 1950 DB2. In 1966 design work began on a new GT model and both car and engine were to be unleashed on the public in October 1967. With barely twelve months to complete the car, Aston Martin pulled it off, and the DBS was born. Unfortunately, the new V8 engine wouldn't be ready for another two years and the DBS had to make do with the old-fashioned Lagonda engine. Being heavier than the car it replaced, it was slower but in many ways more refined. When the V8 engine was finally ready for the DBS chassis, the resulting car was one of the fastest, safest and greatest cars of its generation. It would set the benchmark, not just for the next thirty years of Aston Martins, but also its competitors in the GT class. The last of the 5,016 V8-powered cars, a Volante

Special Edition, left the factory on 20 October 2000, ending an era for Aston Martin.

The pace at which technology progresses within the motor industry can be incredibly fast. What may have seemed an almost insurmountable problem in the late 80s and early 90s and therefore a major achievement when resolved, would now seem a minor inconvenience due to the

advances made in component technology.

Aston Martin Engine Development thoroughly details the design and development of Aston Martin engines including the 580X Vantage, the Virage, and the V8 Coupe. In particular it focusses on the twin supercharged 32 valve Vantage engine - an engine which set new standards, being the most powerful production car engine in the world at the time of its release in 1992. Illustrated with photographs from that time and including power and torque curves, this book provides a unique look into a period of Aston's history, written by one of the key men involved in making it happen. It gives an insight into life at the AM factory at Newport Pagnell; an understanding of the benefits of Supercharging at the time of manufacture; and a historic record of engine design, development and production that would otherwise have been lost to time. *Aston Martin Engine Development* will appeal to Aston Martin owners and enthusiasts and to anyone else with an interest in engines and high-performance cars.

Aston Martin is now more than a century old – and what a century it has been. Since its birth in London on the eve of the First World War, the company has experienced the highs of racing triumph – most famously in the 1959 Le Mans 24-hour race – and the lows of bankruptcy, yet throughout it all has been in the first rank of British marques. Published in association with the Aston Martin Heritage Trust and written by enthusiast Richard Loveys, Aston Martin is a fully illustrated history of the company that has created some of the the world's best loved and most widely respected cars, including James Bond's iconic DB5. It covers the cars themselves, the personalities and talents who have shaped Aston Martin from owners to engineers, the drivers who have shared with the company in racing glory, and the centenary celebrations of 2013.

This, the third book in the series on Aston Martin, records the gradual development of the DBS. This title chronicles the various upheavals that occurred in the company between the years 1972, when Sir David Brown sold the company, its near certain death in 1974, and its revival by the Sprague-Minden-Curtis-Flather consortium. This group took the company to new realms with the mighty 400b.h.p. V8 Vantage, the Towns Lagonda V8 and paved the way to the Gauntlet-Livanos era. Stringent emission laws in the USA excluded the V8 until 1978, but the optimistic suggestions of numbers to be built never manifested itself, despite a ready market in the Arab states.
