"This pioneering study of United States direct investment in Japan will interest academic specialists, business managers, and government policymakers in America, Japan, and elsewhere. Drawing on rich historical materials from both sides of the Pacific, including corporate records and government documents never before made public, Mason examines the development of both Japanese policy towards foreign investment and the strategic responses of American corporations. This history is related in part through original case studies of Coca-Cola, Dow Chemical, Ford, General Motors, International Business Machines, Motorola, Otis Elevator, Texas Instruments, Western Electric, and Victor Talking Machine. The book seeks to explain why so little foreign direct investment has entered modern Japan. In contrast to the widely held view that emphasizes an alleged lack of effort on the part of foreign corporations, this study finds that Japanese restrictions merit greater attention. Many analysts of the modern Japanese political economy identify the Japanese government as the key actor in initiating such restrictions. Mason finds that the influence of Japanese business has often proved more potent than these analysts suggest. This book offers fresh insights into both the operation of the modern Japanese political economy and of its relations with the world economy."

Students are bombarded every day with media messages laden with rules: how true patriots should act, how healthy people eat, what real women should look like. Acting Out Culture is the first thematic composition reader to focus students' attention beyond what rules and norms govern their everyday behavior to how the rules themselves have been shaped over time. The author, James Miller, has drawn on his cutting-edge expertise in cultural analysis to help students inquire into those social norms and respond with writing that positions them as citizens making informed decisions about their world.

From the resumption of automobile production at the close of World War II through the 1950s, the American auto industry would see the births and deaths of several manufacturers, great technological advances, and an era of dramatic styling as a prospering nation asserted its growing mobility. Cars of this period are among the most iconic vehicles ever built in the United States: the 1949 Ford, the remarkable Studebaker designs of 1950 and 1953, the 1955-1957 Chevrolets, the "Forward Look" Chrysler products, the ill-fated Edsel and many others. This comprehensive reference book details every model from each of the major manufacturers (including independents such as Kaiser-Frazer and Crosley but excluding very low-volume marques such as Tucker) from model years 1946 through 1959. Year by year, it provides an overview of the industry and market, followed by an individual report on each company: its main news for the year (introductions or cancellations of models, new engines and transmissions, advertising themes, sales trends etc.); its production figures and market status; and its powertrain offerings, paint colors and major options. The company's models are then detailed individually with such information as body styles, prices, dimensions and weights, standard equipment and production figures. Nearly 1,000 photographs are included.

Cultural messages bombard students daily, laden with unstated rules about what makes our work valuable, our bodies ideal, our connections meaningful. Acting Out Culture empowers students to critically read those messages and use writing to speak back to their culture and question its rules. This book appeals especially to those students who are not full participants in the dominant culture, as well as to their instructors, who want to help students see how subtle (and not so subtle) cultural forces can shape their lives--and how they can challenge and resist those forces. The new edition of Acting Out Culture builds on that success, with provocative readings (more than 50 percent of them new) that challenge the rules we live by; pedagogical tools to encourage students to read, think, and write critically about their culture; and instructional support featuring sample syllabi, additional discussion topics, and ideas for teaching with visuals and online content.

Relive the glorious first 25 years of Chevy drag racing in this comprehensive and nostalgic history. With the introduction of Chevy's OHV V-8 in 1955, the brand's domination on the drag strip immediately snowballed. Drag racers loved the compact V-8. It was lightweight, revved high, and responded like no other engine previously produced to modification. Chevy saw a record year in sales in 1955, thanks to a combination of a restyled body and the new mill. It was the age of ingenuity, and those who could get their hands on the new engine were swapping it into engine bays that once housed other weaker mills. Ford's flathead, one that had dominated for so long, was rendered obsolete almost overnight. Chevy had a winner and dominated the sales charts for years to come. Aftermarket manufacturers got on board and offered up all the go-fast goodies needed to make Chevy a winner, no matter what category they ran. From Dragsters to Stock, Chevy's success was immediate. And it was a long-term success, thanks to a combination of years of great styling and a vast array of driveline combinations.

Accomplished racing author Dour Boyce takes a celebratory look at those years of success, with a focus on the first 25 years (1955 through 1980). Chevrolets gave rise to such stars as Bill "Grumpy" Jenkins, "Jungle Jim" Liberman, "Sneaky Pete" Robinson, "Dyno" Don Nicholson, Sox & Martin, Dick Harrell, Dave Strickler, and many more. World champs and fan favorites all drove Chevys. The success showed in the record books. No brand has won more races and events or has set more national records than Chevrolet. And unlike the other manufacturers, Ford and Chrysler, it was done with little to no factory support. Whether you are a hardcore Chevy fan or just love catching up on the history of drag racing during the golden age, this nostalgic look at Chevy racing history is sure to entertain for hours on end.

The Organizational Complex is a historical and theoretical analysis of corporate architecture in the United States after the Second World War. Its title refers to the aesthetic and technological extension of the military-industrial complex, in which architecture, computers, and corporations formed a network of objects, images, and discourses that realigned social relations and transformed the postwar landscape. In-depth case studies of architect Eero Saarinen's work for General Motors, IBM, and Bell Laboratories and analyses of office buildings designed by Skidmore, Owings & Merrill trace the emergence of a systems-based model of organization in architecture, in which the modular curtain wall acts as both an organizational device and a carrier of the corporate image. Such an image--of the corporation as a flexible, integrated system--is seen to correspond with a "humanization" of corporate life, as corporations decentralize both spatially and administratively. Parallel analyses follow the assimilation of cybernetics into aesthetics in the writings of artist and visual

theorist Gyorgy Kepes, as art merges with techno-science in the service of a dynamic new "pattern-seeing." Image and system thus converge in the organizational complex, while top-down power dissolves into networked, pattern-based control. Architecture, as one among many media technologies, supplies the patterns-images of organic integration designed to regulate new and unstable human-machine assemblages.
