This is a print on demand edition of a hard to find publication. Explores whether sufficient data exists to examine the temporal and spatial relationships that existed in terrorist group planning, and if so,

could patterns of preparatory conduct be identified? About one-half of the terrorists resided, planned, and prepared for terrorism relatively close to their eventual target. The terrorist groups existed for 1,205 days from the first planning meeting to the date of the actual/planned terrorist incident. The planning process for specific acts began 2-3 months prior to the terrorist incident. This study examined selected terrorist groups/incidents in the U.S. from 1980-2002. It provides for the potential to identify patterns of conduct

that might lead to intervention prior to the commission of the actual terrorist incidents.

This is the story of a boy raised up in a village in Poland during World War II, with his father deported to concentration camps throughout the war. Some years after he graduated from medical school, he serendipitously entered the then developing field of dialysis, and he eventually embarked on a career-long practice in the field, where he contributed to the development of a number of new inventions and therapeutic methods. The book contains 13

chapters covering the 2005 author's childhood, education, and his career-long contributions to the field of nephrology. The book includes inspirational stories of his patients; the struggles he faced in the course of getting his numerous inventions patented; his research work in the 1990s; his work of teaching and consulting; and not the least, his travels to interesting places unrelated to business. The book concludes with an epilogue summarizing his life, as well as his predictions regarding treatment of chronic renal failure in the future.
