What determines whether complex life will arise on a planet, or even any life at all? Questions such as these are investigated in this groundbreaking book. In doing so, the authors synthesize

information from astronomy, biology, and paleontology, and apply it to what we know about the rise of life on Earth and to what could possibly happen elsewhere in the universe. Everyone who has been thrilled by the recent discoveries of extrasolar planets and the indications of life on Mars and the Jovian moon Europa will be fascinated by Rare Earth, and its implications for those who look to the heavens for companionship.

Highly controversial when it was first published in 1981, Alasdair MacIntyre's After Virtue has since established itself as a landmark work in contemporary moral philosophy. In this book, MacIntyre sought to address a crisis in moral language that he traced back to a European Enlightenment that had made the formulation of moral

---

principles increasingly difficult. In the search for a way out of this impasse, MacIntyre returns to an earlier strand of ethical thinking, that of Aristotle, who emphasised the importance of 'virtue' to the ethical life. More than thirty years after its original publication, *After Virtue* remains a work that is impossible to ignore for anyone interested in our understanding of ethics and morality today.

Successor to Twain's first collection of travel memoirs takes a second look at Europe. In "A Tramp Abroad," Twain's abundant humor waxes as freely as ever; this time, however, his amusement bears a more cynical cast, as he regards the grand tourist sights of Innocents through his now older and more experienced eyes.

This intelligence guide was prepared in response to requests from law enforcement executives for guidance in intelligence functions in a post-September 11 world. It will help law enforcement agencies develop or enhance their intelligence capacity and enable them to fight terrorism and other crimes while preserving community policing relationships. The world of law enforcement intelligence has changed dramatically since September 11, 2001. State, local, and tribal law enforcement agencies have been tasked with a variety of new responsibilities; intelligence is just one. In addition, the intelligence discipline has evolved significantly in recent years. As these various trends have merged, increasing numbers of American law enforcement agencies have begun to explore, and sometimes embrace,

the intelligence function. This guide is intended to help them in this process. The guide is directed primarily toward state, local, and tribal law enforcement agencies of all sizes that need to develop or reinvigorate their intelligence function. Rather than being a manual to teach a person how to be an intelligence analyst, it is directed toward that manager, supervisor, or officer who is assigned to create an intelligence function. It is intended to provide ideas, definitions, concepts, policies, and resources. It is a primera place to start on a new managerial journey. Every law enforcement agency in the United States, regardless of agency size, must have the capacity to understand the implications of information collection, analysis, and intelligence sharing. Each agency must have an organized mechanism to receive and manage intelligence as well as a mechanism to report and share critical information with other law enforcement agencies. In addition, it is essential that law enforcement agencies develop lines of communication and information-sharing protocols with the private sector, particularly those related to the critical infrastructure, as well as with those private entities that are potential targets of terrorists and criminal enterprises. Not every agency has the staff or resources to create a formal intelligence unit, nor is it necessary in smaller agencies. This document will provide common language and processes to develop and employ an intelligence capacity in SLTLE agencies across the United States as well as articulate a uniform understanding of concepts, issues, and terminology for law enforcement

---

intelligence (LEI). While terrorism issues are currently most pervasive in the current discussion of LEI, the principles of intelligence discussed in this document apply beyond terrorism and include organized crime and entrepreneurial crime of all forms. Drug trafficking and the associated crime of money laundering, for example, continue to be a significant challenge for law enforcement. Transnational computer crime, particularly Internet fraud, identity theft cartels, and global black marketeering of stolen and counterfeit goods, are entrepreneurial crime problems that are increasingly being relegated to SLTLE agencies to investigate simply because of the volume of criminal incidents. Similarly, local law enforcement is being increasingly drawn into human trafficking and illegal immigration enterprises and the often associated crimes related to counterfeiting of official documents, such as passports, visas, driver's licenses, Social Security cards, and credit cards. All require an intelligence capacity for SLTLE, as does the continuation of historical organized crime activities such as auto theft, cargo theft, and virtually any other scheme that can produce profit for an organized criminal entity. To be effective, the law enforcement community must interpret intelligence-related language in a consistent manner. In addition, common standards, policies, and practices will help expedite intelligence sharing while at the same time protecting the privacy of citizens and preserving hard-won community policing relationships.~

The U.S. Navy is ready to execute the Nation's tasks at sea, from prompt and sustained combat operations to every-day forward-presence, diplomacy and relief efforts. We operate worldwide, in space, cyberspace, and throughout the maritime domain. The United States is and will remain a maritime nation, and our security and prosperity are inextricably linked to our ability to operate naval forces on, under and above the seas and oceans of the world. To that end, the Navy executes programs that enable our Sailors, Marines, civilians, and forces to meet existing and emerging challenges at sea with confidence. Six priorities guide today's planning, programming, and budgeting decisions: (1) maintain a credible, modern, and survivable sea based strategic deterrent; (2) sustain forward presence, distributed globally in places that matter; (3) develop the capability and capacity to win decisively; (4) focus on critical afloat and ashore readiness to ensure the Navy is adequately funded and ready; (5) enhance the Navy's asymmetric capabilities in the physical domains as well as in cyberspace and the electromagnetic spectrum; and (6) sustain a relevant industrial base, particularly in shipbuilding.

A "fascinating slice of rarely considered American history" (Booklist)—the story of Henry Ford and Thomas Edison—whose annual summer sojourns introduced the road

---

trip to our culture and made the automobile an essential part of modern life. In 1914 Henry Ford and naturalist John Burroughs visited Thomas Edison in Florida and toured the Everglades. The following year Ford, Edison, and tire maker Harvey Firestone joined together on a summer camping trip and decided to call themselves the Vagabonds. They would continue their summer road trips until 1925, when they announced that their fame made it too difficult for them to carry on. Although the Vagabonds traveled with an entourage of chefs, butlers, and others, this elite fraternity also had a serious purpose: to examine the conditions of America's roadways and improve the practicality of automobile travel. Cars were unreliable and the roads were even worse. But newspaper coverage of these trips was extensive, and as cars and roads improved, the summer trip by automobile soon became a desired element of American life. The Vagabonds is "a portrait of America's burgeoning love affair with the automobile" (NPR) but it also sheds light on the important relationship between the older Edison and the younger Ford, who once worked for the famous inventor. The road trips made the automobile ubiquitous and magnified Ford's reputation, even as Edison's diminished. The automobile would transform the American landscape, the American economy, and the American way of life and Guinn brings this seminal moment in history to vivid life. Philosophy begins with questions about the nature of reality and how we should live. These were the concerns of Socrates, who

spent his days in the ancient Athenian marketplace asking awkward questions, disconcerting the people he met by showing them how little they genuinely understood. This engaging book introduces the great thinkers in Western philosophy and explores their most compelling ideas about the world and how best to live in it. In forty brief chapters, Nigel Warburton guides us on a chronological tour of the major ideas in the history of philosophy. He provides interesting and often quirky stories of the lives and deaths of thought-provoking philosophers from Socrates, who chose to die by hemlock poisoning rather than live on without the freedom to think for himself, to Peter Singer, who asks the disquieting philosophical and ethical questions that haunt our own times. Warburton not only makes philosophy accessible, he offers inspiration to think, argue, reason, and ask in the tradition of Socrates. *A Little History of Philosophy* presents the grand sweep of humanity's search for philosophical understanding and invites all to join in the discussion.

The China Relief Expedition, an eight-nation military effort, was organized to rescue foreign nationals in the country during the Boxer Uprising (1899–1901). In *Thirteen Months in China*, Thakur Gadadhar Singh, a British Indian soldier of the 7th Rajput Regiment, recounts his experiences as he set sail along with his men for Beijing in the summer of 1900. Written shortly after his return to India in 1901, he

details several aspects of China and its people he met over the course of thirteen months. Part travelogue, part history, Singh's eyewitness account offers a first-hand view of the tumultuous events of the Boxer Uprising and its aftermath, as also of Chinese society, culture, politics, religion, and art and architecture, often in a comparative perspective. It is a rare historical source of an Indian subaltern's outlook on the history of China, and its customs and practices.

Updated to reflect questions found on the most recent ESL tests, this book presents 400 common phrasal verbs as they are used in everyday English. Phrasal verbs are verbs combined with prepositions or adverbs. Familiarity with phrasal verbs and understanding their use as nouns (breakup, showoff, etc.) or adjectives (spaced-out, broken-down, stressed-out, and many others) is essential to ESL students. Updated information includes: the most commonly

used phrasal verbs; activities and examples that reflect our current technology and the world around us; an expanded introduction for the teacher with a thorough breakdown and explanation of phrasal verbs; and, a discussion of separable and inseparable phrasal verbs in Unit I, and more. This book's hundreds of examples in context and hundreds of exercises will be extremely useful to ESL students who are preparing for TOEFL or who simply wish to improve their English.

articles, alphabetically arranged and written by some seventy faculty members and alumni in addition to the author, covers all aspects of Princeton life in the past as well as in the present. Of special interest are the biographies of eminent Princetonians, including the University's presidents, well-known trustees, distinguished deans, famous alumni, and some of Princeton's most prominent and popular professors. Other articles in the book embrace a wide range of topics: histories of academic departments, programs, and research units; descriptions of the honor system, the preceptorial method, the four-course plan, and coeducation; a historical survey of the University's acquisition of land and the development of its campus, together with articles on its principal buildings; pieces on student activities; accounts of alumni activities; articles on athletics; portraits of notable personalities; and commentaries on a host of lighter topics such as the cane spree, beer jackets, the Faculty Song, the proctors, and Veterans of Future Wars. Among the most important articles are one summarizing Woodrow Wilson's Sesquicentennial address, "Princeton in the Nation's Service," and a dozen others recording faculty and alumni achievements toward the goal encompassed by that phrase. This text aims to develop vocabulary skills by teaching students three basic strategies: dictionary skills, context clues, and word elements, all within an approach that links students' general knowledge to vocabulary and helps students see that vocabulary is relevant to their lives. Unifying themes for each chapter are central to the author's approach, as are the carefully paced lessons and exercise sequences. The text includes readings on subjects from across the disciplines and supplies information that is of use to students in their other or future coursework.

Henriksson, Chief Investment Officer, Advanced Portfolio Management "Quants"--those who design and implement mathematical models for the pricing of derivatives, assessment of risk, or prediction of market movements--are the backbone of today's investment industry. As the greater volatility of current financial markets has driven investors to seek shelter from increasing uncertainty, the quant revolution has given people the opportunity to avoid unwanted financial risk by literally trading it away, or more specifically, paying someone else to take on the unwanted risk. *How I Became a Quant* reveals the faces behind the quant revolution, offering you the chance to learn firsthand what it's like to be a quant today. In this fascinating collection of Wall Street war stories, more than two dozen quants detail their roots, roles, and contributions, explaining what they do and how they do it, as well as outlining the sometimes unexpected paths they have followed from the halls of academia to the front lines of an investment revolution.
