In 1897, at the height of the heroic age of Arctic exploration, the visionary Swedish explorer S. A. Andr e made a revolutionary attempt to discover the North Pole by flying over it in a hydrogen balloon. Thirty-three years later, his expedition diaries and papers would be discovered on the ice. Alec Wilkinson uses the explorer's papers and contemporary sources to tell the full story of this ambitious voyage, while also showing how the late 19th century's spirit of exploration and scientific discovery drove over 1,000 explorers to the unforgiving Arctic landscape. Suspenseful and haunting, Wilkinson captures Andr e's remarkable adventure and illuminates the detail, beauty, and devastating conditions of traveling and dwelling on the ice.

Spearhead of Logistics Consumer Reports Books

Spearhead of Logistics is a narrative branch history of the U.S. Army's Transportation Corps, first published in 1994 for transportation personnel and reprinted in 2001 for the larger Army community. The Quartermaster Department coordinated transportation support for the Army until World War I revealed the need for a dedicated corps of specialists. The newly established Transportation Corps, however, lasted for only a few years. Its significant utility for coordinating military transportation became again transparent during World War II, and it was resurrected in mid-1942 to meet the unparalleled logistical demands of fighting in distant theaters. Finally becoming a permanent branch in 1950, the Transportation Corps continued to demonstrate its capability of rapidly supporting U.S. Army operations in global theaters over the next fifty years. With useful lessons of high-quality support that validate the necessity of adequate transportation in a viable national defense posture, it is an important resource for those now involved in military transportation and movement for ongoing expeditionary operations. This text should be useful to both officers and noncommissioned officers who can take examples from the past and apply the successful principles to future operations, thus ensuring a continuing legacy of Transportation excellence within Army operations. Additionally, military science students and military historians may be interested in this volume.

. Renewal of Life by Transmission. The most notable distinction between living and inanimate things is that the former maintain themselves by renewal. A stone when struck resists. If its resistance is greater than the force of the blow struck, it remains outwardly unchanged. Otherwise, it is shattered into smaller bits. Never does the stone attempt to react in such a way that it may maintain itself against the blow, much less so as to render the blow a contributing factor to its own continued action. While the living thing may easily be crushed by superior force, it none the less tries to turn the energies which act upon it into means of its own further existence. If it cannot do so, it does not just split into smaller pieces (at least in the higher forms of life), but loses its identity as a living thing. As long as it endures, it struggles to use surrounding energies in its own behalf. It uses light, air, moisture, and the material of soil. To say that it uses them is to say that it turns them into means of its own conservation. As long as it is growing, the energy it expends in thus turning the environment to account is more than compensated for by the return it gets: it grows. Understanding the word "control" in this sense, it may be said that a living being is one that subjugates and controls for its own continued activity the energies that would otherwise use it up. Life is a self-renewing process through action

upon the environment.

As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says:

Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Bewary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz -- rich cars, poor quality. There's only one Saturn you should buy. Toyota -- enough apologies: "when you mess up, fess up."

An exploration of how the ancient Maya engaged with their history by using, altering, and burying stone sculptures. For the ancient Maya, monumental stone sculptures were infused with agency. As they were used, reused, altered, and buried, such sculptures retained ceremonial meaning. In Memory in Fragments, Megan E. O'Neil explores how ancient Maya people engaged with history through these sculptures, as well as how they interacted with the stones themselves over the course of the sculptures' long "lives." Considering Maya religious practices, historiography, and conceptions of materials and things, O'Neil explores how Maya viewers perceived sculptures that were fragmented, scarred, burned, damaged by enemies, or set in unusual locations. In each case, she demonstrates how different human interactions, amid dynamic religious, political, and historical contexts, led to new episodes in the sculptures' lives. A rare example of cross-temporal and geographical work in this field, Memory in Fragments both compares sculptures within ancient Maya culture across Honduras, Guatemala, Mexico, and Belize over hundreds of years and reveals

how memory may accrue around and be evoked in material remains.

Early Greek Ethics is devoted to Greek philosophical ethics in its formative period, from the last decades of the sixth century BCE to the beginning of the fourth century BCE. It begins with the inception of Greek philosophical ethics and ends immediately before the composition of Plato's and Aristotle's mature ethical works Republic and Nicomachean Ethics. The ancient contributors include Presocratics such as Heraclitus, Democritus, and figures of the early Pythagorean tradition such as Empedocles and Archytas of Tarentum, who have previously been studied principally for their metaphysical, cosmological, and natural philosophical ideas. Socrates and his lesser known associates such as Antisthenes of Athens and Aristippus of Cyrene also feature, as well as sophists such as Gorgias of Leontini, Antiphon of Athens, and Prodicus of Ceos, and anonymous texts such as the Pythagorean Acusmata, Dissoi Logoi, Anonymus Iamblichii, and On Law and Justice. In addition to chapters on these individuals and texts, the volume explores select fields and topics especially influential to ethical philosophical thought in the formative period and later, such as early Greek medicine, music, friendship, justice and the afterlife, and early Greek ethnography. Consisting of thirty chapters composed by an international team of leading philosophers and classicists, Early Greek Ethics is the first volume in any language devoted to philosophical ethics in the formative period.
