This is a book for tall people, those who relate to them, and anyone interested in height in general. Being tall coincides with considerable professional, athletic, and social benefits. Yet there are also some problems, and these raise some questions. For instance, if longer levers and more cells really are behind increased risk of injuries and cancer, then how is it that giraffes get by? And why is it that society reveres tall stature but then compromises our safety with cramped cars and other things? And, as tall women might be pondering, where have all the tall, dark, and handsome men gone? Lastly, what can be done about all this? These questions and more will all be answered by a tall protagonist over eight chapters: Evolution, Scaling, Spine, Manufactured, Ergonomics, Growth, Longevity, and Society.

While war historians may disagree over whether Japan had plans to invade Australia in WW2, all will agree three Japanese midget submarines came into Sydney Harbour with serious intent in 1942. But little has surfaced [until now] of a fourth midget submarine and the story of survival of one of the Japanese crew. Alone and adrift, the youthful survivor was hauled aboard a coastal steamer only to be dumped on remote Lord Howe Island with another unwelcome passenger. The two survived in the wild for a while before an island woman came on the scene. Denied the pleasures of the island paradise, the Japanese submariner was inhumanely interned until an amorous liaison secured his passage to freedom. In 2006, 64 years later, bestselling Japanese novelist Hiraku Makimura lands in Sydney to speak at a writers' seminar. From the moment a young woman steps into his hotel room he is on an emotional rollercoaster, while driving a Subaru around Sydney turns into a fatal nightmare. The hotel receptionist is an added distraction, until a woman with her own agenda takes Makimura in hand, leading him surreally to an improbable rendezvous with the submerged past—an encounter that rocks him to the core of his being.
