The goal of this book is to provide an

introduction to the practical use of

mobile NMR at a level as basic as the

operation of a smart phone. Each

description follows the same didactic

pattern: introduction, basic theory, pulse

sequences and parameters, beginners-

level measurements, advanced-level

measurements, and data processing.

Nuclear Magnetic Resonance (NMR)

spectroscopy is the most popular

method for chemists to analyze

molecular structures while Magnetic

Resonance Imaging (MRI) is a non-

invasive diagnostic tool for medical

doctors that provides high-contrast

images of biological tissue depicting the

brain function and the beating heart. In

both applications large super-

conducting magnets are employed

which magnetize atomic nuclei of an

object positioned inside the magnet.

Their circulating motion is interrogated

by radio-frequency waves. Depending

on the operating mode, the frequency

spectrum provides the chemist with

molecular information, the medical

doctor with anatomic images, while the

materials scientist is interested in NMR

relaxation parameters, which scale with

material properties and determine the

contrast in magnetic resonance images. Recent advances in magnet technology led to a variety of small permanent magnets, by which NMR spectra, images, and relaxation parameters can be measured with mobile and low-cost instruments.

The phenomena of Japan emerging as one of the most competitive industrial nations in the twentieth century and the general shift of competitiveness to East Asia since the 1980s have been widely studied by many scholars from different fields of the social sciences. Drawing on sources from Japanese, Swiss, and American archives, the historical analysis of this book tackles a wide range of actors and sheds light on the various processes that enabled Japanese watch companies to transfer technology and expand commercially starting in the second half of the nineteenth century. By exploring the case of the watch industry, this book serves to establish a better understanding of the origins of the

competitiveness of Japanese manufacturing and its evolution until its decline in the post-bubble economy (in the 1990s and 2000s).
