Land Rover Defender, 90 & 110 (inc. Diesel and 130) Step-by-step Service Guide Haynes Manuals

From the popular Haynes Owners' Workshop Manual space series, which includes NASA Apollo 11 Manual and NASA Space Shuttle Manual, this unique book provides an insight into the only car ever built to be driven on the surface of another world. With a Foreword by the first Apollo astronaut to drive it on the Moon, Dave Scott, and published to coincide with the 40th anniversary of mankind's final drive on the Moon in December 2012. The book is part mechanical guide, illustrated with many of the technical drawings from the time, and part narrative-driven story of engineering ingenuity and human triumph. It draws on the rich NASA photographic archive and the complete transcripts of the crews' reaction to driving across the Moon, which the authors have an unparalleled knowledge and experience of working with.

Land Rover Series II, IIA and III Restoration Manual Haynes Manuals

Land Rover Discovery Service and Repair Manual Brooklands Book Limited

Covers the Series 3 V-8 model and should be used in conjunction with the Series 3 workshop manual

Land Rover Series II, IIA and III Haynes Publishing

A Series Land Rover has to be the ultimate life-sized automotive jigsaw puzzle. Simple to repair, with a good supply of new and used parts, a restoration is well within the capabilities of an amateur mechanic. While the official Parts and Workshop Manuals can be considered essential reading they were written for professional mechanics working on reasonably new, unmodified vehicles – not a 60 year old model assembled with parts from different eras. They will tell you very little about parts compatibility over the generations, how to repair a bulkhead or front panel or the best techniques to assemble your vehicle onto a new chassis. This manual seeks to answer many of the commonly asked questions and offers practical solutions, tips and techniques for the common problems encountered when restoring and maintaining a Series Land Rover. It covers:

- history, vehicle development and compatibility of parts
- the overhaul of the major mechanical components including engine, gearbox and axles
- practical techniques for body repairs, fitment and alignment
- in-depth chassis and bulkhead repairs
- how to decide between saving or replacing a major component
- the current availability of components
- major current restoration trends: functional rebuild, resto-mod build, patina recommission or concours restoration
