In this book the use of hybrid simulation in delivery room emergencies is described and shown. The use of a patient actor combined with a task trainer within the same session substantially improve the training for practical management of intrapartum emergencies in real life, reducing the risk of failure of operative vaginal delivery and of related adverse events, including perinatal or maternal complications. Furthermore, simulation with high reality computerized mannequin and scenography of emergency situation can improve technical and manual skills of the participants. For this book and the related videos, a new generation of mannequins suitable for both clinical manoeuvres and ultrasound examination is used to simulate all clinical scenarios of emergency that can happen in the delivery room for both the mother and the child. This unique book is a useful tool for medical students, residents, practicing pediatricians, anesthetists, obstetricians and all health care professionals working in the delivery room in their ability to deal with critical and emergency situations with safety and good medical practice.

Handbook of Drug-Nutrient Interactions CRC Press
The aim of this book is to provide one central resource for nurses within the adult spectrum of life-long congenital heart disease care who are seeking expert guidance for their practice, regardless of clinical setting. Over the past 50 years, advances in surgical techniques and medical therapies have drastically improved the number of congenital heart disease patients surviving into adulthood, with the result being that there are now more adults then children living with congenital heart disease. In the past three decades, recognition of this new cardiology subspecialty has given way to formalized programs, standards of care, and multidisciplinary expertise. Indeed Nursing care of adult patients with congenital heart disease (ACHD) is a relatively new medical subspecialty with limited knowledge and guidance available and also an important component of the multidisciplinary care team. Nursing care of the ACHD encompasses a holistic approach to the physical, psychological, social, and spiritual wellbeing of these unique individuals across their lifespan. Understanding the intricacies for the various heterogeneous defect types, the transition from pediatric to adult care, the unique educational and self-care needs, life-events such as pregnancy/reproduction, advanced heart failure, and end-of-life care helps prepare the nurse caring for the ACHD patient. Nurses as a first point of care for the ACHD patients play a pivotal role in the education and empowerment of the ACHD patient population and provide an invaluable role in the multidisciplinary team and with this guide nurses can feel confident in the quality of the care they provide. This book aims to introduce nursing focused care to wider audiences, nurses, medical technicians, and physicians who are involved in the management and treatment of ACHD patients. Improving care and the quality of life for adult congenital heart disease patients with a multidisciplinary team-based approach, including nursing care, should be a central goal for all ACHD programs.

Handbook of ICU Therapy Rough Guides UK
Handbook of Drug-Nutrient Interactions, Second Edition is an essential new work that provides a scientific look behind many drug-nutrient interactions, examines their

relevance, offers recommendations, and suggests research questions to be explored. In the five years since publication of the first edition of the Handbook of Drug-Nutrient Interactions new perspectives have emerged and new data have been generated on the subject matter. Providing both the scientific basis and clinical relevance with appropriate recommendations for many interactions, the topic of drug-nutrient interactions is significant for clinicians and researchers alike. For clinicians in particular, the book offers a guide for understanding, identifying or predicting, and ultimately preventing or managing drug-nutrient interactions to optimize patient care. Divided into six sections all chapters have been revised or are new to this edition. Chapters balance the most technical information with practical discussions and include outlines that reflect the content; discussion questions that can guide the reader to the critical areas covered in each chapter, complete definitions of terms with the abbreviation fully defined and consistent use of terms between chapters. The editors have performed an outstanding service to clinical pharmacology and pharmaco-nutrition by bringing together a multi-disciplinary group of authors. Handbook of Drug-Nutrient Interactions, Second Edition is a comprehensive up-to-date text for the total management of patients on drug and/or nutrition therapy but also an insight into the recent developments in drug-nutrition interactions which will act as a reliable reference for clinicians and students for many years to come.

Guide to Microforms in Print Michael Brein, Inc.

The first encompassing treatise of this new, but very important field puts the known physical limitations for classic 2D electronics into perspective with the requirements for further electronics developments and market necessities. This two-volume handbook presents 3D solutions to the feature density problem, addressing all important issues, such as wafer processing, die bonding, packaging technology, and thermal aspects. It begins with an introductory part, which defines necessary goals, existing issues and relates 3D integration to the semiconductor roadmap of the industry. Before going on to cover processing technology and 3D structure fabrication strategies in detail. This is followed by fields of application and a look at the future of 3D integration. The contributions come from key players in the field, from both academia and industry, including such companies as Lincoln Labs, Fraunhofer, RPI, ASET, IMEC, CEA-LETI, IBM, and Renesas.

The ESC Textbook of Heart Failure is the latest addition to the European Society of Cardiology (ESC) publications portfolio and is fully supported by the European Heart Failure Association. The textbook brings together internationally renowned experts in the field of heart failure to present an up-to-date understanding of all aspects of this chronic condition that worsens with time. It is estimated that the worldwide population of patients suffering from heart failure is approximately 26 million. This clinically oriented work reflects contemporary European guidelines from the ESC and the European Heart Failure Association and summarizes the latest evidence from clinical trials. Made up of eighteen different sections the textbook covers the epidemiology, etiology, prevention, pathophysiology, and clinical phenotypes of heart failure. The assessment and management of chronic, acute, and advance heart failure are all discussed in detail. As well as chapters dedicated to self-care and patient education, the multidisciplinary approach to heart failure management, and clinical trial design and interpretation. The future direction of the field is discussed throughout with separate chapters on digital health, big data, and telemedicine/remote monitoring in heart failure also included. A must read for cardiovascular healthcare specialists in Europe and across the world it should also appeal to those in training, general physicians and those caring of the elderly, cardiothoracic surgeons, primary care doctors, and specialist nurses too.

A Practical Guide on Behaviour Change Support for Self-Managing Chronic Disease

Oxford University Press

This open access book is a valuable resource for students in health and other professions and practicing professionals interested in supporting effective change in self-management behaviors in chronic disease, such as medication taking, physical activity and healthy eating. Developed under the auspices of the Train4Health project, funded by the Erasmus+ program of the European Union, the book contains six chapters written by international contributors from different disciplines. Chapter one introduces the competencies necessary for delivering effective behavior change support, based on an established program of work, and related learning outcomes. The four following chapters describe how these competencies can be acquired, focusing on concepts and theories, assessing self-management behaviors, implementing change strategies and person-centered communication, using a practical approach. The last chapter points out supplementary learning resources, developed as part of the Train4Health project.
