The Mix Cartech  
Jenna Fischer's Hollywood  
journey began at the age of 22  
when she moved to Los Angeles  
from her hometown of St. Louis.  
With a theater degree in hand,  
she was determined, she was  
confident, she was ready to work  
hard. So, what could go wrong?  
Uh, basically everything. The  
path to being a professional  
actor was so much more vast  
and competitive than she'd  
imagined. It would be eight long  
years before she landed her  
iconic role on *The Office*, nearly  
a decade of frustration, struggle,  
rejection and doubt. If only  
she'd had a handbook for the  
aspiring actor. Or, better yet,  
someone to show her the  
way—an established actor who  
could educate her about the  
business, manage her  
expectations, and reassure her in  
those moments of despair. Jenna  
wants to be that person for you.

With amusing candor and wit,  
Fischer spells out the nuts and  
bolts of getting established in the  
profession, based on her own  
memorable and hilarious  
experiences. She tells you how to  
get the right headshot, what to  
look for in representation, and  
the importance of joining forces  
with other like-minded artists  
and creating your own  
work—invaluable advice  
personally acquired from her  
many years of struggle. She  
provides helpful hints on how to  
be gutsy and take risks, the tricks  
to good auditioning and  
callbacks, and how not to fall for  
certain scams (auditions in a  
guy's apartment are probably not  
legit—or at least not for the kind  
of part you're looking for!). Her  
inspiring, helpful guidance feels  
like a trusted friend who's made  
the journey, and has now  
returned to walk beside you,  
pointing out the pitfalls as you  
blaze your own path towards the  
life of a professional actor.

background of more than 1,000 magazine articles on the subject, engine control expert Jeff Hartman explains everything from the basics of engine management to the building of complicated project cars. Hartman has substantially updated the material from his 1993 MBI book *Fuel Injection* (0-879387-43-2) to address the incredible developments in automotive fuel injection technology from the past decade, including the multitude of import cars that are the subject of so much hot rodding today. Hartman's text is extremely detailed and logically arranged to help readers better understand this complex topic.

It is the most advanced book on the market, a must-have for tuners and calibrators and a valuable resource for anyone who wants to

make horsepower with a fuel-injected, electronically controlled engine. **Consumers Index to Product Evaluations and Information Sources** Fuel cells are one of the cleanest and most efficient technologies for generating electricity. Since there is no combustion, there are none of the pollutants commonly produced by boilers and furnaces. For systems designed to consume hydrogen directly, the only products are electricity, water and heat. Fuel cells are an important technology for a potentially wide variety of applications including on-site electric power for households and commercial buildings; supplemental or auxiliary power to support car, truck and aircraft systems; power for personal, mass and commercial transportation; and the modular addition by utilities of new power generation closely tailored to meet growth in power consumption. These applications will be in a large number of industries worldwide. In this Seventh

Edition of the Fuel Cell Handbook, we have discussed the Solid State Energy Conversion Alliance Program (SECA) activities. In addition, individual fuel cell technologies and other supporting materials have been updated.

The photos in this edition are black and white. Mitsubishi's 4G63t engine is among the most powerful engines ever in the sport-compact world. It's not uncommon to find one of these four-cylinder, iron-block, aluminum-headed, 2-liter turbocharged monsters making more than 1,000 horsepower with the right modifications and tuning - well above the 200-300 hp produced in the factory-made engines. Bolted into such cars as the Mitsubishi Lancer Evolution, Eclipse, and Galant, and the Eagle Talon and Plymouth Laser, the 4G63t has more than a cult following among sport-compact enthusiasts, who know and respect this engine's immense performance potential at the track or on the street. Up until now, in-depth performance information on the

4G63t has been hard to find. For this book, author Robert Bowen went straight to the source, Robert Garcia of Road/Race Engineering in Santa Fe Springs, California. RRE is the most well-known and respected Mitsubishi turbo performance shop in the United States, and Garcia is its in-house engine builder. Mitsubishi enthusiasts will benefit from Garcia's expertise and be able to build better, stronger engines than ever before. "How to Build Max-Performance Mitsubishi 4G63t Engines" covers every system and component of the engine, including the turbocharger system and engine management. More than just a collection of tips and tricks, this book includes a complete history of the engine and its evolution, an identification guide, and advice for choosing engine components and other parts. Profiles of successful built-up engines show the reader examples of what works, and the book includes helpful guidance for choosing your own engine building path. *The Times-picayune Index* 1966-1973 include

"Since its earliest days, flight has been about pushing the limits of technology and, in many cases, pushing the limits of human endurance. The human body can be the limiting factor in the design of aircraft and spacecraft. Humans cannot survive unaided at high altitudes. There have been a number of books written on the subject of spacesuits, but the literature on the high-altitude pressure suits is lacking. This volume provides a high-level summary of the technological development and operational use of partial- and full-

pressure suits, from the earliest models to the current high altitude, full-pressure suits used for modern aviation, as well as those that were used for launch and entry on the Space Shuttle. The goal of this work is to provide a resource on the technology for suits designed to keep humans alive at the edge of space."--NTRS Web site.
