Popol Vuh, the Quich'Ã©

Mayan book of creation is

not only the most

important text in the native

language of the Americas,

it is also an extraordinary

document of the human

imagination. It begins with

the deeds of Mayan Gods

in the darkness of a

primeval sea and ends with

the radiant splendor of the

Mayan Lords who founded

the Quich'Ã© Kingdom in

the Guatemalan highlands.

Originally written in Mayan

hieroglyphs, it was

translated into the Roman

alphabet in the 16th

century. The new edition

of Dennis Tedlock's

unabridged, widely praised

translation includes new

notes and commentary,

newly translated passages, newly deciphered hieroglyphs, and over 40 new illustrations.

This report describes a new system of credentialing that has arisen in the information technology and telecommunications industries over the past decade. It compares this system to traditional higher education, identifying both similarities and dissimilarities, and points to some cases in which the two interact.... The summary section of this report emphasizes the major themes of the certification

system and its relationship to higher education: 1. The system is global and operates in many languages. 2. The student, not the institution, is at the center of the system. 3. The system has brought competency-based education and performance assessment to a status they have never enjoyed within traditional higher education. 4. Certification replace neither experience nor degrees, and the IT system does not pretend to be higher education. the summary also indicates the critical need for more information on certification candidates

and providers of course work, since the new system is now large enough to play a role in state and national planning for postsecondary education. (HoF/text adopted).

A fascinating addition to the magical literature of the Elizabethan era, this unique grimoire is a must-have for magic aficionados and historians. Dating from the time of Shakespeare (c. 1580), The Book of Oberon is a meticulous transcription and translation of a magic book recently

rediscovered by the Folger Shakespearean Library. Unlike the more theoretical magic books of the era, this is a compilation of practical spells, secrets, and summonings. The Book of Oberon includes rituals for summoning spirits and faeries (including Oberon); original drawings; talismans and charms for toothaches, bleeding, the capture of thieves, and other practical matters; one of the oldest known copies of the magical manual The Enchiridion; and much more.

This book presents a broad overview of computer graphics (CG), its history, and the hardware tools it employs. Covering a substantial number of concepts and algorithms, the text describes the techniques, approaches, and algorithms at the core of this field. Emphasis is placed on practical design and

implementation, highlighting how graphics software works, and explaining how current CG can generate and display realistic-looking objects. The mathematics is non-rigorous, with the necessary mathematical background introduced in the Appendixes. Features: includes numerous figures, examples and solved exercises; discusses the key 2D and 3D transformations, and the main types of projections; presents an extensive selection of methods, algorithms, and techniques; examines advanced techniques in CG, including the nature and properties of light and color, graphics standards and file formats, and fractals; explores the principles of image compression;

describes the important input/output graphics devices.

The treatise De mundo offers a cosmology in the Peripatetic tradition which subordinates what happens in the cosmos to the might of an omnipotent god. Thus the work is paradigmatic for the philosophical and religious concepts of the early imperial age, which offer points of contact with nascent Christianity.

Forty years ago, Buzz Aldrin became the second human - minutes after Neil Armstrong - to set foot on a celestial body other than the Earth. The event remains one of mankind's greatest achievements and was witnessed by the largest worldwide television audience in history. In the years since, millions more have had

their earth-centric perspective changed forever by gazing at the iconic photograph of Aldrin standing on the surface of the Moon with the blackness of space behind him. He described what he saw as 'magnificent desolation'. The flight of Apollo 11 made Aldrin one of the most famous people on the planet, yet few people know the rest of the story. In *Magnificent Desolation*, Aldrin not only gives us a harrowing first-person account of the lunar landing that came within seconds of failure, as well as the ultimate insider's view of life as one of the superstars of America's space program, he also opens up with remarkable candor about his more personal trials - and eventual triumphs - back on Earth. From the glory of being part of the mission that fulfilled President Kennedy's challenge to reach the Moon before the

decade was out, Aldrin returned home to an Air Force career stripped of purpose or direction, other than as a public relations tool that NASA put to relentless use in a seemingly nonstop world tour. The twin demons of depression and alcoholism emerged - the first of which Aldrin confronted early and publicly and the second of which he met with denial until it nearly killed him. As an adventure story, a searing memoir of self-destruction and self-renewal, and as a visionary rallying cry to once again set our course for Mars and beyond, *Magnificent Desolation* is the thoroughly human story of a genuine hero.
