"Not to be missed." -Lora Leigh, New York Times #1 bestselling author of Black Jack A fierce Highland laird ready to kill for king and country...

When Torin McLeren discovers his neighbor's plot against his king, he takes their daughter as his prisoner, thereby stopping her father's plot from going forward. But that leaves him with a woman under his roof whom he can't ignore, and not just because she's his enemy's daughter... A woman who's as much trouble as she is temptation... Shannon McBoyd decides to use her captor to experience passion for the first time, and then to destroy him. But her plan goes awry because once she has lured Torin into her

bed, she no longer wants to hurt the one man who seems to value and understand her... Even if her father will kill him-and her-when he discovers what they've done... "Deeply romantic, scintillating, and absolutely delicious." -Sylvia Day, national bestselling author of The Stranger I Married "Mary Wine's writing is absolutely stellar." -CK2 Kwips & Critiques "Mary Wine has a definite knack for pacing, and the story never lets up." -Bookaholics

First published in 1988, this encyclopedia serves as an

overview and point of entry to the complex interdisciplinary field of Victorian studies. The signed articles, which cover persons, events, institutions, topics, groups and artefacts in Great Britain between 1837 and 1901, have been written by authorities in the field and contain bibliographies to provide guidelines for further research. The work is intended for undergraduates and the general reader, and also as a starting point for graduates who wish to explore new fields.

This volume contains the papers presented at the NATO Advanced Research Institute on "Non-Linear Dynamics and Fundamental Interactions" held in Tashkent, Uzbekistan, from Oct.10-16,2004. The main objective of the Workshop was to bring together people working in areas of Fundamental physics relating to Quantum Field Theory, Finite Temperature Field theory and their applications to problems in particle physics, phase transitions and overlap regions with the areas of Quantum Chaos. The other important area is related to aspects of Non-Linear Dynamics which has been considered with the topic of chaology. The applications of such techniques are to mesoscopic systems, nanostructures, quantum information, particle physics and cosmology. All this forms a very rich area to review critically and then find aspects that still need careful consideration

with possible new developments to find appropriate solutions. There were 29 one-hour talks and a total of seven half-hour talks, mostly by the students. In addition two round table discussions were organised to bring the important topics that still need careful consideration. One was devoted to questions and unsolved problems in Chaos, in particular Quantum Chaos. The other round table discussion considered the outstanding problems in Fundamental Interactions. There were extensive discussions during the two hours devoted to each area. Applications and development of new and diverse techniques was the real focus of these discussions. The conference was ably organised by the local committee consisting of D.U.

*Includes pictures *Discusses Assyrian military tactics, religious practices, and more *Includes ancient Assyrian accounts documenting their military campaigns and more *Includes a bibliography for further reading "I fought daily, without interruption against Taharqa, King of Egypt and Ethiopia, the one accursed by all the great gods. Five times I

hit him with the point of my arrows inflicting wounds from which he should not recover, and then I laid siege to Memphis his royal residence, and conquered it in half a day by means of mines, breaches and assault ladders." - Esarhaddon "I captured 46 towns...by consolidating ramps to bring up battering rams, by infantry attacks, mines, breaches and siege engines." - Sennacherib

When scholars study the history of the ancient Near East, several wars that had extremely brutal consequences (at least by modern standards) often stand out. Forced removal of entire populations, sieges that decimated entire cities, and wanton destruction of property were all tactics used by the various peoples of the ancient Near East against each other, but the Assyrians were the first people to make war a science. When the Assyrians are mentioned, images of war and brutality are among the first that come to mind, despite the fact that their culture prospered for nearly 2,000 years. Like a number of ancient individuals and empires in that region, the negative perception of ancient Assyrian culture was passed down through Biblical accounts, and regardless of the accuracy of the Bible's depiction of certain events, the Assyrians clearly played the role of adversary for the Israelites. Indeed, Assyria (Biblical Shinar) and the Assyrian people played an important role in many books of the Old Testament and are first mentioned in the book of Genesis: "And the beginning of his kingdom was Babel and Erech, and Akkad, and Calneh, in the land of Shinar. Out of that land went forth Ashur and built Nineveh and the city Rehoboth and Kallah." (Gen. 10:10-11). Although the Biblical accounts of the Assyrians are among the most interesting and are often corroborated with other historical sources, the Assyrians were much more than just the enemies of the Israelites and brutal thugs. A historical survey of ancient Assyrian culture reveals that although they were the supreme warriors of their time, they were also excellent merchants, diplomats, and highly literate people who recorded

their history and religious rituals and ideology in great detail. The Assyrians, like their other neighbors in Mesopotamia, were literate and developed their own dialect of the Akkadian language that they used to write tens of thousands of documents in the cuneiform script (Kuhrt 2010, 1:84). Furthermore, the Assyrians prospered for so long that their culture is often broken down by historians into the "Old", "Middle", and "Neo" Assyrian periods, even though the Assyrians themselves viewed their history as a long succession of rulers from an archaic period until the collapse of the neo-Assyrian Empire in the 7th century BCE. In fact, the current divisions have been made by modern scholars based on linguistic changes, not on political dynasties (van de Mieroop 2007, 179). The Assyrians: The History of the Most Prominent Empire of the Ancient Near East traces the history and legacy of Assyria across several millennia. Along with pictures of important people, places, and events, you will learn about the history of the Assyrians like never before, in no time at all.

Algebra, geometry and topology cover a variety of different, but intimately related research fields in modern mathematics. This book focuses on specific aspects of this interaction. The present volume contains refereed papers which were presented at the International Conference "Experimental and Theoretical Methods in Algebra, Geometry and Topology", held in Eforie Nord (near Constanta), Romania, during 20-25 June 2013. The conference was devoted to the 60th anniversary of the distinguished Romanian mathematicians Alexandru Dimca and Stefan Papadima. The selected papers consist of original research work and a survey paper. They are intended for a large audience, including researchers and graduate students interested in algebraic geometry, combinatorics, topology, hyperplane arrangements and commutative algebra. The papers are written by well-known experts from different fields of mathematics, affiliated to universities from all over the world, they cover a broad range of topics and explore the research frontiers of a wide variety of contemporary problems of modern mathematics.

While most books approach power electronics and renewable energy as two separate subjects, Power Electronics for Renewable and Distributed Energy Systems takes an integrative approach; discussing power electronic converters

topologies, controls and integration that are specific to the renewable and distributed energy system applications. An overview of power electronic technologies is followed by the introduction of various renewable and distributed energy resources that includes photovoltaics, wind, small hydroelectric, fuel cells, microturbines and variable speed generation. Energy storage systems such as battery and fast response storage systems are discussed along with application-specific examples. After setting forth the fundamentals, the chapters focus on more complex topics such as modular power electronics, microgrids and smart grids for integrating renewable and distributed energy. Emerging topics such as advanced electric vehicles and distributed control paradigm for power system control are discussed in the last two chapters. With contributions from subject matter experts, the diagrams and detailed examples provided in each chapter make Power Electronics for Renewable and Distributed Energy Systems a sourcebook for electrical engineers and consultants working to deploy various renewable and distributed energy systems and can serve as a comprehensive guide for the upper-level undergraduates and graduate students across the globe.

Bad-Boys and Dark Secrets Are Tough To Keep A Sorority Row Novel Serena DuPont isn't interested in falling in love again. Been there, done that, and she has the pulverized heart to prove it. Leaving behind those sucky romantic choices, she transfers to a new college her sophomore year. All Serena wants to do is pledge a sorority, stay focused on her classes, and swear off sexy players. Tell that to Cole Prescott, the incredibly gorgeous complication that threatens to crush her newfound resolve. Keeping him in the "friend zone" won't be easy, especially when the sizzling chemistry between them is so damn combustible. But that's not Serena's biggest problem... While pledging Zeta Beta, her life gets flipped horribly upside down by a series of ominous threats, nasty rumors,

and even blackmail. And the only place she finds comfort is in the arms of the off-limits frat boy she should be avoiding. Unless Serena can prove her innocence to the ultra-saucy sorority that's accused her of being involved in a lewd sex scandal, Serena is at risk of losing the future she's fought so hard to rebuild. Resigned to the fate of the Greek gods, Serena might not be able to lie her way out of this epic disaster. Want to know what happens in this tale of scorching romance and epic drama? Their frightened, angry faces are grim reminders of the reach of war. They are millions of children, orphaned, displaced, forced to flee or to fight. And just as they have myriad possibilities for trauma, their lives also hold great potential for recovery. The Handbook of Resilience in Children of War explores these critical phenomena at the theoretical, research, and treatment levels, beginning with the psychosocial effects of exposure to war. Narratives of young people's lives in war zones as diverse as Afghanistan, Sri Lanka, Columbia, and Sudan reveal the complexities of their experiences and the meanings they attach to them, providing valuable keys to their rehabilitation. Other chapters identify strengths and limitations of current interventions, and of constructs of resilience as applied to youth affected by war.

Throughout this cutting-edge volume, the emphasis is on improving the field through more relevant research and accurate, evidence-based interventions, in such areas as: An ecological resilience approach to promoting mental health in children of war. Child soldiers and the myth of the ticking time bomb. The Child Friendly Spaces postwar intervention program. The role of education for war-zone immigrant and refugee students. Political violence, identity, and adjustment in children. The Handbook of Resilience in Children of War is essential reading for researchers, scientist-practitioners, and graduate students in diverse fields including clinical child, school, and developmental psychology; child and adolescent psychiatry; social work; counseling; education; and allied medical and public health disciplines.

Colonial Lives offers a rich variety of archival documents in translation which bring to life the political and economic workings of Latin American colonies during 300 years of Spanish rule, as well as the day-to-day lives of the colonies' inhabitants. Intended to complement textbooks such as Burkholder and Johnson's Colonial Latin America by presenting students with primary sources -- the raw materials on which the facts in other textbooks are based -- this reader strives to illustrate the impact of issues such as race, class, gender, sexuality, culture and religion in the daily lives of both natives and colonists alike. The concerns, struggles and perspectives of the inhabitants of colonial Latin America are reflected in transcripts of civil and criminal court cases, administrative reviews, ecclesiastical investigations, Inquisition trials, wills, and letters the editors have included in this reader. Each document is prefaced by an introduction that places it in the social and political context of the period. The book also includes a glossary of terms and lists of suggested further readings. Most uniquely, the book offers helpful thematic cross-referencing sections and an index of themes which allow instructors to easily adapt the book to their courses and to assign readings according to the criteria of their own specific curriculums.

Remarkable developments have taken place in the domain of political theory in the present age of liberalisation and globalisation. The concept of the nation-state has undergone a major change on account of the irresistible erosion of sovereignty in the internal and external spheres and the emergence of the model of a transnational state. Different models of state may be seen in the countries of the Third World. It has put a question mark on the future of the nation-state. The basic tenets of liberalism have been challenged by Neo-liberalism and Communitarianism with the result that now it is on the retreat. In the post-World War II period, the New Fabians had revised the tenets of Fabianism, but in the post-Cold War era it has been replaced by the Third Way. The pluralists had attacked the classical theory of sovereignty, but the neo-pluralists have given a new shape to it. The theme of political legitimacy has been revisited. The old concept of citizenship requires to be

reinterpreted in the contexts of civic republicanism, multi-culturalism and identity politics. It has happened with other themes as well which may be taken note of in the emergence of new topics like Neo-colonialism, Post-colonialism, Post-communism and the like. The task of a political scientist is to comprehend and critically describe the underlying principles of political behaviour in their empirical as well as normative dimensions. Inter-disciplinary focus has become so popular now that the implications of the themes of various social sciences have penetrated into the domain of each other. The discipline of political science has become a study of 'power' and of 'struggle' for its sake at any level -- local, regional, national and international. In the light of these salient features, university courses have been modernised, and the author has done well to cover them in this work so as to adequately meet the requirements of students offering this course at the degree and postgraduate levels and of candidates preparing for competitive examinations.

Nick Megoran explores the process of building independent nation-states in post-Soviet Central Asia through the lens of the disputed border territory between Uzbekistan and Kyrgyzstan. In his rich "biography" of the boundary, he employs a combination of political, cultural, historical, ethnographic, and geographic frames to shed new light on nation-building process in this volatile and geopolitically significant region. Megoran draws on twenty years of extensive research in the borderlands via interviews, observations, participation, and newspaper analysis. He considers the problems of nationalist discourse versus local vernacular, elite struggles versus borderland solidarities, boundary delimitation versus everyday experience, border control versus resistance, and mass violence in 2010, all of which have exacerbated territorial anxieties. Megoran also revisits theories of causation, such as the loss of Soviet control, poorly defined boundaries, natural resource disputes, and historic ethnic clashes, to show that while these all contribute to heightened tensions, political actors and their agendas have clearly driven territorial aspirations and are the overriding source of conflict. As this compelling case study shows, the boundaries of the The Ferghana Valley put in succinct focus larger global and moral questions of what defines a good border.
