Consuming History Routledge NEW YORK TIMES BESTSELLER WALL STREET JOURNAL BESTSELLER "Sprint offers a transformative formula for testing ideas that works whether you're at a startup or a large organization. Within five days, you'll move from idea to prototype to decision, saving you and your team countless hours and countless dollars. A must read for entrepreneurs of all stripes." --Eric Ries, author of

The Lean Startup From three partners at Google Ventures, a unique five-day process for solving tough problems, proven at more than a hundred companies. Entrepreneurs and leaders face big questions every day: What's the most important place to focus your effort, and how do you start? What will your idea look like in real life? How many meetings and discussions does it take before you can be sure you have the right solution? Now there's a surefire way to answer these important questions: the sprint. Designer Jake Knapp created the five-day process at Google, where sprints were used on

everything from Google Search to Google X. He joined Braden Kowitz and John Zeratsky at Google Ventures, and together they have completed more than a hundred sprints with companies in mobile, e-commerce, healthcare, finance, and more. A practical guide to answering critical business questions, Sprint is a book for teams of any size, from small startups to Fortune 100s, from teachers to nonprofits. It's for anyone with a big opportunity, problem, or idea who needs to get answers today.

Non-academic history – ‘public history’ – is a complex, dynamic entity which impacts on the popular understanding of the past at all levels. In *Consuming History*, Jerome de Groot examines how society consumes history and how a reading of this

consumption can help us understand popular culture and issues of representation. This book analyzes a wide range of cultural entities – from computer games to daytime television, from blockbuster fictional narratives such as *Da Vinci Code* to DNA genealogical tools – to analyze how history works in contemporary popular culture. Jerome de Groot probes how museums have responded to the heritage debate and the way in which new technologies have brought about a shift in access to history, from online game playing to internet genealogy. He discusses the often conflicted relationship

between ‘public’ and academic history, and raises important questions about the theory and practice of history as a discipline. Whilst mainly focussing on the UK, the book also compares the experiences of the USA, France and Germany. *Consuming History* is an important and engaging analysis of the social consumption of history and offers an essential path through the debates for readers interested in history, cultural studies and the media.

Modern cars are more computerized than ever. Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. But vehicle technologies haven't kept pace with today's more hostile security environment, leaving millions vulnerable to attack. The Car Hacker's Handbook will

---

give you a deeper understanding of the computer systems and embedded software in modern vehicles. It begins by examining vulnerabilities and providing detailed explanations of communications over the CAN bus and between devices and systems. Then, once you have an understanding of a vehicle's communication network, you'll learn how to intercept data and perform specific hacks to

track vehicles, unlock doors, glitch engines, flood communication, and more. With a focus on low-cost, open source hacking tools such as Metasploit, Wireshark, Kayak, can-utils, and ChipWhisperer, *The Car Hacker's Handbook* will show you how to: –Build an accurate threat model for your vehicle –Reverse engineer the CAN bus to fake engine signals –Exploit vulnerabilities in diagnostic and data-logging systems –Hack the ECU and other

firmware and embedded systems –Feed exploits through infotainment and vehicle-to-vehicle communication systems –Override factory settings with performance-tuning techniques –Build physical and virtual test benches to try out exploits safely If you're curious about automotive security and have the urge to hack a two-ton computer, make *The Car Hacker's Handbook* your first stop. *Motor Auto Repair Manual*. An award-winning scientist offers his unorthodox approach to childrearing: “Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions” (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you’re like many parents, you might ask family and friends for advice when faced with important choices about

how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to

---

teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley’s sassy kids show

him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You’ll be laughing and learning at the same time.

(Short Wavelength Automated Perimetry) which are currently being tested, will be evaluated and discussed in terms of how to make the best clinical use of this new information. Content from previous edition will be updated: In Part I the content will be updated and some portions of the text will be rewritten for clarity. A lot of attention will be paid to deleting outdated material and illustrations. About the old printouts will be replaced

with new printouts from the latest instrumentation. Part II chapters will be thoroughly reorganized to be more clinically useful with special guidelines like (when to use each of the various test strategies; how to arrive at a clinical diagnosis; and how to watch out for). Part III will contain information on how to use the older instrument (HFA I) and the newer instrument (HFA II). It will also show the perimetrist how to perform tests and get results they

did not know were possible (i.e., how to make a copy of the field for another doctor).
