Ton Up! A Century of Caf é Racer
Speed and Style focuses on the story

of the ton-up boys and their caf é racers. But it's much more than just that. Illustrated with historic and modern photos and featuring a text by one of the world ’ s motorcycle historians, it's really the story of motorcycle speed and style evolved from the early 1900s right through today. Cafe racers are most associated with the young, rebellious rock-and-rollers of 1960s Britain. These riders created the quintessential caf é racers—fast motorcycles customized to resemble the racing bikes of the period. They were called “ caf é racers ” because their riders raced on public roads, from one caf é to the next. The goal was to do “ the ton ” (exceed 100 miles per hour) on these runs, which led to their designation as “ ton-up boys. ” Today, ton-up culture is more popular than ever and recognized worldwide with a following of young and long-time riders alike. With Ton Up!, enjoy a scenic ride through the history of this vibrant scene.

Riding motorcycles is fun, but author Ken Condon maintains that there is a state of consciousness to be achieved beyond the simple pleasure of riding down the road. Riding in the Zone helps riders find that state of being. It's the experience of being physically and mentally present in the moment, where every sense is sharply attuned to the ride. Your mind becomes silent to the chatter of daily life, and everyday problems seem to dissolve. You feel a deeper appreciation for life. Your body responds to this state of being with precise, fluid movements, you feel in balance, your muscles are relaxed, and it seems as though every input you make is an expression of mastery. This is "the Zone." Condon identifies all of the factors that affect entering the Zone and addresses each one individually, from the development of awareness and mental skills to mastering physical control of the motorcycle. At the end of each chapter are drills designed to transform the book's ideas into solid, practical riding skills. Riding in the Zone takes riders to the next level in their skill set.

Table 2. 2. Each note consists of three partials. If the sequence is played ascending, then the first virtual pitch tends to be perceived, whereas if played descending, the second, lower virtual pitch tends to be heard. Only one virtual pitch is audible at a time. This can be heard in sound examples [S: 6] and [S: 7]. Note First Second Third Virtual Pitch Virtual Pitch partial partial partial ascending descending 1 600 800 1000 200. 0 158. 9 2 620 820 1020 205. 2 163. 0 3 640 840 1040 210. 4 167. 1 4 660 860 1060 215. 6 171. 2 5 680 880 1080 220. 9 175. 3 6 700 900 1100 226. 1 179. 4 7 720 920 1120 231. 3 183. 6 8 740 940 1140 236. 6 187. 7 9 760 960 1160 241. 8 191. 8 10 780 980 1180 247. 0 195. 9 11 800 1000 1200 252. 2 200. 0 Pitch and virtual pitch are properties of a single sound. For instance, a chord played

by the violin, viola, and cello of a string quartet is not usually thought of as having a pitch; rather, pitch is associated with each instrumental tone separately. Thus, determining the pitch or pitches of a complex sound source requires that it first be partitioned into separate perceptual entities. Only when a cluster of partials fuse into a single sound can it be assigned a pitch. When listening analytically, for instance, there may be more “ notes ” present than in the same sound when listening holistically.
