The growing interest in the field of biological membranes in recent years is documented by the very large number of articles, reviews, journals and books which are appearing in this field. Why then now a manual on "Membrane Proteins"? The answer is multifold. The protocols which were distributed by the

teachers and lecturers at the FEBS-SKMB Course organized in Bern appeared to be very useful not only during the Course to correctly perform the experiments, but also for the future benefit of other students and other courses. To us they appeared very modern and of simple execution, ideal for a University Advanced Course, a Summer School, or similar scientific initiatives. The possibility was also foreseen that such a manual could be used by professional scientists, although

not initiated into the problems, assumptions and intricacies of biochemical methodology. There are also many research teams who study proteins, for example of human fluids, and who will certainly be interested in the application of new but simply described methods. At the same time we present the student with some more complicated physical techniques which are, however, simply described and easy to execute. Statistical Procedures for Agricultural Research

Here in one easy-to-understand volume are the statistical procedures and techniques the agricultural researcher needs to know in order to design, implement, analyze, and interpret the results of most experiments with crops. Designed specifically for the non-statistician, this valuable guide focuses on the practical problems of the field researcher.

Throughout, it emphasizes the use of statistics as a tool of research—one that will help pinpoint research problems and select remedial measures. Whenever possible, mathematical formulations and statistical jargon are avoided. Originally published by the International Rice Research Institute, this widely respected guide has been totally updated and much expanded in this Second Edition. It now features new chapters on the analysis of multi-observation data and experiments

conducted over time and space. Also included is a chapter on experiments in farmers' fields, a subject of major concern in developing countries where agricultural research is commonly conducted outside experiment stations. *Statistical Procedures for Agricultural Research*, Second Edition will prove equally useful to students and professional researchers in all agricultural and biological disciplines. A wealth of examples of actual experiments help readers to

choose the statistical method best suited for their needs, and enable even the most complicated procedures to be easily understood and directly applied.
