Today’s first year composition classrooms are largely reflective of the writing pedagogy that has been used for the last 200 years. Unfortunately, this methodology does not meet the research or writing needs of today’s college and university students. Burns and MacBride were determined to make their first year composition courses more relevant to their students and sought a way to revolutionize their syllabus to do so. Building on the work of Tom Romono, Nancy Mack, Camille Allen, Sirpa Grierson, Melinda Putz (and others), Burns and MacBride set out to determine if a multigenre research project could better teach their students research, writing, and critical thinking skills than a traditional research-based essay. The findings of their semester-long study indicated that not only does a MGRP teach these skills, but it far surpasses a traditional essay in teaching engagement, intellectual creativity, and transferable writing skills. Burns and MacBride demonstrate two different ways to integrate a multigenre research project into the college composition classroom. Stargirl MIT Press

This highly multidisciplinary collection discusses an increasingly important topic among scholars in science and technology studies: objectivity in science. It features eleven essays on scientific objectivity from a variety of perspectives, including philosophy of science, history of science, and feminist philosophy.

Topics addressed in the book include the nature and value of scientific objectivity, the history of objectivity, and objectivity in scientific journals and communities. Taken individually, the essays supply new methodological tools for theorizing what is valuable in the pursuit of objective knowledge and for investigating its history. The essays offer many starting points, while suggesting new avenues of research. Taken collectively, the essays exemplify the very virtues of objectivity that they theorize—in reading them together, the reader can sense various anxieties about the dangerously subjective in our age and locate commonalities of concern as well as differences of approach. As a result, the volume offers an expansive vision of a research community seeking a communal understanding of its own methods and its own epistemic anxieties, struggling to enunciate the key problems of knowledge of our time and offer insight into how to overcome them.

This game situates students in the Multiparty Negotiating Process taking place at the World Trade Center in Kempton Park in 1993. South Africa is facing tremendous social anxiety and violence. The object of the talks, and of the game, is to reach consensus for a constitution that will guide a post-apartheid South Africa. The country has immense racial diversity--white,

black, Colored, Indian. For the negotiations, however, race turns out to be less critical than cultural, economic, and political diversity. Students are challenged to understand a complex landscape and to navigate a surprising web of alliances. The game focuses on the problem of transitioning a society conditioned to profound inequalities and harsh political repression into a more democratic, egalitarian system. Students will ponder carefully the meaning of democracy as a concept and may find that justice and equality are not always comfortable partners with liberty. While for the majority of South Africans, universal suffrage was a symbol of new democratic beginnings, it seemed to threaten the lives, families, and livelihoods of minorities and parties outside the African National Congress coalition. These deep tensions in the nature of democracy pose important questions about the character of justice and the best mechanisms for reaching national decisions. This third edition of Teaching and Researching Writing continues to build upon the previous editions ’ work of providing educators and practitioners in applied linguistics with a clearly written and complete guide to writing research and teaching. The text explores both theoretical and conceptual questions, grapples with key issues in the field today, and demonstrates the dynamic relationship between research and teaching methods and practice. This revised third edition has been reorganized to incorporate new topics, including discussions of technology, identity, and error correction, as well as new chapters to address the innovative directions the field has taken since the previous edition ’ s publication. Boxes throughout, including "Concepts" and "Quotes", help to both reinforce readers ’ understanding of the topics covered by highlighting key ideas and figures in the field, while the updated glossary and resource sections allow readers to further investigate areas of interest. This updated edition of Teaching and Researching Writing is the ideal resource for language teachers, practitioners, and researchers to better understand and apply writing research theories, methods, and practices.

"The growth in English language teaching worldwide and the related increase in teacher training programmes of all kinds highlight the need for greater accountability in the assessment of teachers. The need for formal summative assessment has taken on greater importance in training programmes and requires procedures which do not always sit easily with the development process, while transparency of assessment procedures is also increasingly demanded by the candidates themselves. This edited volume discusses key issues in assessing language teachers' professional skills and knowledge and provides case study illustrations of how teacher knowledge and teaching skills are assessed at pre-service and in-service levels within the framework of the Cambridge English Teaching Qualifications. The volume provides: - discussion of ways in which the changing nature of English language teaching has impacted on teacher education and assessment - examples of specific assessment procedures for both teaching knowledge and practical classroom skills - accounts of the ways in which the Cambridge English Teaching Qualifications have been integrated into and adapted for local contexts. This is the first volume of its kind wholly dedicated to language teacher assessment and as such will be of interest to language teachers and teacher educators as well as to researchers and postgraduate students"--

Writing With Skill, Level 3: Student Workbook Rowman & Littlefield

In a time of declining resources in institutions of higher education, we grapple with how priorities are to be set for the limited resources available. Most vulnerable are those students labeled underprepared by colleges and universities. Should we argue that the limited resources available ought to be used to support these students through their undergraduate years? And, if we decide that we want to do that, what evidence of their potential for success can we provide that will justify the use of these resources? Through longitudinal research that follows students who have been so labeled over all their college years, we can begin to find answers to these questions. Time to Know Them is the first book that follows the experiences of a group of students over their entire academic experience. No previous studies have brought together the factors incorporated in this study: *examining writing and learning on a true longitudinal basis; *studying a multicultural urban population; *investigating the relationship between writing and learning by examining papers written over time for regularly assigned academic courses across a range of disciplines; and *taking into consideration non-academic factors that influence academic performance such as race, gender, socio-economic status, and ideological orientation. Through interviews twice a semester over six years, the collection of papers written for all courses, observations of instructional settings, and analysis of required institutional tests of writing, the author has been able to pull together a more complete picture of writing and intellectual development over the college years than has previously been available in any study. Students are seen to acquire the ability to handle more complex reasoning tasks as they find themselves in more challenging intellectual settings and where risk-taking and exploration of new ideas are valued. The integration of students' previous life experiences into their academic studies allows them to analyze, critique, modify, and apply their previously held world views to their new learning. These changes are seen to occur over time with instructional settings and support providing key roles in writing development. Personal factors in students' lives present difficulties that require persistence and dedication to overcome. Never before have the complexities of real individual lives as they affect academic performance been so clearly presented.
