Complex Inheritance Patterns. The Punnett Square Approach for a

Monohybrid Cross. ... If the pattern of inheritance (dominant or

recessive) is known, the phenotypic ratios can be inferred as well. For a

monohybrid cross of two true-breeding parents, each parent contributes

one type of allele. In this case, only one genotype is possible.

Inheritance patterns of F<sub>2</sub> progeny were non-Gaussian and

deviated from Mendelian expectations. However, discrete alkyl

cannabinoid segregation patterns consistent with digenic as well

as epistatic modes of inheritance were observed among F<sub>2</sub>

THCAS and CBDAS genotypes. These results suggest linkage

between cannabinoid pathway loci and highlight ...
