Application This 721 Digital Speed Control was designed as a marine propulsion engine control to use with a changeable pitch propeller control. This control has two sets of control dynamics which the operator can switch to get most suitable engine operation: either when only the propeller shaft is driven, or when both the propeller shaft and the generator are driven.

721 Digital Speed Control For Reciprocating Engines Product Specification. 02708E. 721 Digital Speed Control. for Power Generation Applications. APPLICATIONS. The 721 Digital Speed Control is a powerful, configurable load sharing and speed control with a torsional filter. The 721 control governs gas or diesel reciprocating engines driving generators through flexible couplings. Using inputs from both the engine and generator sides of the coupling, the 721 control filters out torsionals in the speed signals.
